

AMERICAN DRY
STAND ECHOED
IN ALL NATIONSMr. Johnson Tells Work-
ers That Prohibition
Will StayLICENSE PLAN SHOWN
AS 4000-YEAR FAILURE"Must Get Rid of the Drink
to Get Rid of the Evil," He
Assures Delegates

WINONA LAKE, Ind., Aug. 24 (Special)—America's stand for prohibition has found an echo throughout the entire world, according to William ("Tussyfoot") Johnson, international representative of the World League Against Alcoholism, who delivered the address which marked the close of the World League Congress at Winona Lake.

As delegates left for their homes in various parts of the world, Johnson and other leaders carried with them the memories of promises of a brighter day just ahead in the international campaign against alcoholism. The congress was declared to have been the greatest gathering of opponents of rum ever held in the world's history.

"Liquor license schemes are not of modern origin," declared Mr. Johnson. "They go back more than 4000 years to the time when Hammurabi as King of Babylon, realizing the evils of drink, enacted a law through which he hoped to correct these evils by licensing the drink business. He sought to get rid of the evil without getting rid of the drink."

Pain Teaching Into Practice
Philosophers, chemists, statesmen and lawmakers have been working ever since to try to devise some scheme or to inaugurate some system or enact some law that would rid the world of the evils of drink without letting go the drink itself. Hammurabi failed and so have all since his time. We in America finally concluded that 4000 years of failure was enough, and decided to try something else, so we devised the plan of getting rid of the evil by getting rid of the drink and so we have the Eighteenth Amendment and prohibition.

"America's stand on liquor started something in nearly every nook and corner of the world. Approximately 700,000,000 people were established in being taught by their religions for a thousand years that drinking is wrong. Hundreds of millions of Hindus, Buddhists, Sikhs, Jains and Animists have been teaching this since their religions were established. Twelve centuries ago Muhammad denounced drinking as something accursed and to this day 250,000,000 of his followers have ruined the drink traffic in remote regions of the world. "The people of the world have been quick to see that with the adoption of the Eighteenth Amendment, the United States, the greatest Christian Nation, has not only adopted their original teaching on liquor, but has actually written these teachings into the law of the land."

America Not to Lie Down
Mr. Johnson's final admonition to the foreign delegates was this: "Go back to your homes and say that America is not going to lie down to be walked over by the oppressors of the former Union system. Tell the world that America has settled the problem. Say that straight ahead is the only direction that America knows anything about traveling. Say that America is not a crab that crawls backward. "I believe that the people of the world will see that America will happen in every part of the world—when the flag of no civilization will any longer fly over a brewery, a distillery or a drinking hole."

Manhattan Executive
to Push Traffic Plans

Special from Monitor Bureau

New York, Aug. 24

PLANS for speeding up traffic in the Borough of Manhattan have received an impetus with the return of Julius Miller, borough president, from a trip abroad. Mr. Miller said the first questions to which attention would be given are the proposed "chicken" tunnel under the East River, running also part way across the city in Thirty-Eighth Street, and the express motor highway on the West Side. The proposed vehicular tunnel would run to a rapidly growing section of Long Island City, providing the only crossing of the East River between the Williamsburg and the Queensborough bridges, a distance of several miles.

COLORADO RIVER
ACCORD HELD UP
BY TWO STATESUpper-Basin Group Seeking
Basis for Arizona-California
Compromise

DENVER, Colo., Aug. 24 (Special)

As the second day of the Colorado River Conference closed here, with California and Arizona still unable to agree, an executive conference of the four upper basin states—Colorado, Wyoming, Utah and New Mexico—was called with the hope of drawing up a compromise proposal. The differences between California and Arizona over division of the water allocated the lower-basin states by the compact drawn at Santa Fe in 1922 have held up final ratification and the present conference was called in an effort to arrive at an amicable settlement in order that the compact can be finally approved and put in operation.

Thomas B. Maddock, member of the Arizona delegation, summed up Arizona's stand, saying his State has agreed to postpone discussion of the power question with California and confine the present conference to water division and the formation of a supplementary compact between the two river states.

Development Prospects Compared
Mr. Maddock dwelt at length on the relative irrigation development and water power possibilities of Arizona and California in support of the former's contention that it is entitled to a larger share of the water.

Bird Garden Built and Equipped
at Eastern States Fair GroundsAmerican Home Makers, Inc., Also Sets Aside Its Entire
Area of Two Acres as Bird Sanctuary and to Promote
Love for Birds Among Visitors to Exposition

SPRINGFIELD, Mass., Aug. 24

(Special)—The entire grounds of the home department, comprising about two acres, at the Eastern States Exposition, will be developed as a bird sanctuary, with trees, shrubbery, houses and shelters to promote comfort and happiness of the winged creatures, according to plans adopted by the American Home Makers, Inc., having charge of this division.

In support of this plan and as an object-lesson in bird conservation, a bird garden 75 feet square has been built and equipped in a corner of the grounds close to a main entrance.

In this garden are model homes for various kinds of birds, feeding stations, birdbaths, and other ingenious accessories. In the center of the plot a fountain plays over a rock garden, and on a 15-foot post in one corner of the enclosure is an apartment hotel with 48 rooms, for housing the birds. Thirty varieties of trees and shrubs have been planted in this little park, including fir, hemlock, arbutus, red, white and Scotch pine, mountain ash, cornus, viburnum, barberry, honeysuckle and so on. Between the walks and shrubbery is beautiful lawn, the ground having been made fertile for the cultivation of the flora.

Evergreen Trees

About the garden have been planted many little evergreen trees to give shelter to the birds and charm to the picture and also many kinds of shrubs whose berries are prized by the birds as food. Thirty varieties of trees and shrubs have been planted in this little park, including fir, hemlock, arbutus, red, white and Scotch pine, mountain ash, cornus, viburnum, barberry, honeysuckle and so on. Between the walks and shrubbery is beautiful lawn, the ground having been made fertile for the cultivation of the flora.

Entrance to the garden is through a white pergola above which runs a tiny windmill, and at the opposite corner, just outside the garden, will be a log cabin where leaflets will be distributed and oral information given. Inside the garden is a long settee where visitors can take notes. Little painted boards posted at the entrance carry a lesson as to the value of birds to the Nation.

This plan is financed by persons who are impressed by the opportunity to cultivate a love of birds and show the people who come by the thousands from many states how they can attract birds to their grounds and protect their gardens from insect foes, while doing their bit to conserve the bird life of the Nation. The bird houses, with their air-cooled spaces and other advantages, and everything else about the garden is of the most up-to-date type,

North Station Street Widening
Favored Before CommissionersPlanning Board Chairman Says That Proposed Avenue
From Charles River Dam Will Aid Traffic
Entering and Leaving City

Approval was given today before the board of street commissioners to the proposition to widen Causeway Street and to extend and widen

Nashua Street to the Charles River Dam which is the Boston end of the northern artery. The entire proposition is not to cost more than \$1,000,000 which the city of Boston was empowered by the last Legislature to raise by bond issues either inside or outside of the debt limit as Mayor Nichols may decide.

The plan for this completion of the northern highway in Boston was formulated by the Metropolitan Planning Board of which Henry I. Harriman is chairman. The Boston & Maine Railroad Company before the Legislature advocated the improvement and obligated itself to sell to the city land in front of the North Station in Causeway Street and in Nashua Street sufficient to widen these thoroughfares to not less than 100 feet and to extend Nashua Street through its abandoned freight sheds and yards. The road will sell the land, it is understood, at one-half of its assessed value, or \$580,436 in all.

Part of Loop Highway

Before the Legislature the officials representing the road indicated that a new railroad terminal station and train sheds will be built at Causeway and Nashua Streets, the site of the old Boston & Lowell station.

Mr. Harriman told the street commissioners today that the widening, repaving and reconstructing of Causeway and Nashua Streets with the wide curved connection from Nashua to Leverett and Charles Streets is a part of a plan devised for a Loop Highway through the eastern and northern sections of down town Boston which the Legislature failed to sanction.

He said the northern artery has been estimated, though incomplete at present, to be carrying the next to the largest amount of traffic of any of the radial highways entering Boston. The widening of Causeway and Nashua Streets together with the construction of the connecting link through the abandoned Boston & Maine freight yards would give in Boston a wide open gateway for the northern artery. All of Boston's business and shopping districts would be opened directly to northern traffic and the market district and the fruit and produce merchants would

be given easy access to the new railroad freight terminals across the Charles River, Mr. Harriman said.

To Aid Freight Handling

The northern highway will be used by the railroad freight interests as soon as their extensions to the north of the Charles are completed, and already traffic by that route has increased greatly, Mr. Harriman said.

Mr. Harriman said that Causeway Street, at a width of 92 feet, as the commissioners propose, will have two lanes of traffic routes with the pillars of the Boston Elevated structure between them. From Causeway and Nashua Streets, thus widened, access to radiating streets leading to every part of Boston will be provided.

Martha M. Lomasney, member of the House of Representatives from Ward 2, one of the original sponsors for the plan, said the widening of these streets with their northern connection will revive the declining business in the West and North Ends of Boston and largely increase property values. With the building of a new railroad terminal, other commercial enterprises are bound to follow, he said.

Daniel C. Kiley, realtor, also spoke, urging immediate action by the commissioners.

OVER \$1,000,000
IN PROPERTY IS
SOLD FOR \$91,000Knight Company Disposes
of Manhaug Plant—
Mills to Be Put to Use

MANCHAUG, Mass., Aug. 26 (P)

Practically the entire village of Manhaug was sold at public auction yesterday for \$91,000, by the Knight Finance Corporation, on behalf of the B. & R. Knight, Inc., owners of the three mills and 78 parcels of real estate which included 70 houses.

The houses brought an average of \$970, and the three mills went for \$23,100. Architects and building contractors who were at the sale said it would cost at least \$1,000,000 to duplicate today these properties that sold for \$91,000.

Three Mills Sold

Mill No. 1, was bought by George Litchman, a woolen dealer of Woonsocket, R. I., for \$9000. Mills 2 and 3 went to W. J. Brady of Uxbridge for \$4800, and \$3800 respectively.

Mill 1 is a three- and four-story cut granite structure, having a floor area of 125,000 square feet. It is equipped with elevators, sprinklers, toilet rooms, fire towers, steam power plant, water wheels, generators, strongly fenced and in fine condition. Included with Mill 1 is a two-story cut granite warehouse, built in 1919. All flowage and riparian rights necessary to protect the water for this mill were included in the sale.

Mill 2 is a three-story cut granite mill with a one-story weaver shed and 50,000 square feet of floor space. It is fully equipped and includes several other buildings and riparian rights. Mill 3 is a four-story cut granite mill with 125,000 square feet of floor space and is equipped with elevators and steam power plant.

Four-Family House \$400

What was considered one of the greatest bargains was a 2½-story, four-family 20-room brick house that went for \$400.

Mill 1 is to be put in operation within three months, as a woolen factory, according to the new owner. Since the mills stopped turning, the Waucautuck Mills of Uxbridge, will be put to some use soon, but just what has not been determined. The village was founded in 1826 by the B. & R. Knight, Inc., for manufacturing purposes and has been rebuilt since. It was a thriving industrial community until 1921 when the post-war collapse forced the closing of the mills, and when inhabitants moved to other places.

Since the mills stopped turning, the Knight corporation has allowed the tenants free use of the buildings.

Modern Homes for Birds Provided in This Reservation

Bird Garden at Eastern States Exposition Grounds, Showing Main Entrance, With Rock Garden and Fountain Beyond and a Bird Apartment House on the Left.

SOUTH AND WEST
DECLARED READY
FOR NEW PARTYFarm Revolt Will Not Be
Stopped, Williamstown
Institute Is Told

By a Staff Correspondent

WILLIAMSTOWN, Mass., Aug. 24

A political farm revolt that will set the South and the West against the North and East, the agriculturist against the industrialist, and find expression in the coming presidential election with results that may fundamentally alter the complexion of American party politics was forecast here by representative leaders of the cotton and corn belts, speaking before the Institute of Politics.

The American farmer has reached the stage of dissatisfaction when he will bolt any ticket or desert any party not pledged to redress his grievances, it was asserted, and while some speakers implied that the Democrats will be the beneficiaries of the Administration's rejection of the McNary-Haugen bill, others argued that events will weld the South and West into a new farmers' party.

Clarence Cusley, director of the Texas Safe Farming Association and Assistant Secretary of Agriculture under President Harding, declared he saw no compromise or way out on the farm issue, which "must inevitably go to the people in political contest."

Place for New Party

Henry A. Wallace of Iowa, editor of Wallace's Farmer, a western farm publication, and son of a former Secretary of Agriculture, declared conservative farmers in the corn belt are attacking the Republican Party and that "there is now a place for a party composed of western and southern farmers, co-operating with eastern laboring men."

George N. Peek, president of the American Council of Agriculture, justified the farmers' grievances, and declared the progress that has been made toward political co-operation between the West and South has been the result of little more than two years of effort, and added significantly "the welfare of the nation is of far more importance than the welfare of any political party."

"The issue has become political," Mr. Peek said, "because the Administration since the Armistice has refused to recognize the economic injustice being done the farmer and because the President vetoed a non-partisan vote in Congress. If it results in sectional strife the responsibility likewise rests with the Administration and its agricultural policies. There will be an equalization fee in the next Congress, or an equalization flight in the next campaign."

Farmers Seek Share

The rapid industrialization of the United States is being carried on at the expense of the farmer who faces possible submergence in industrialization now proceeding, it was asserted. The farms have lost 3,000,000 people in the last six years and since 1921, speakers declared, the farmers' investment has shrunk about \$20,000,000,000, or one third its total appraisal. These conditions are not temporary, it was asserted, but are expressed in the fact that the farmers are not getting their fair share in the national income.

The Government, Mr. Wallace declared, has given Labor the Adamson Act and Immigration restriction; the railroads an Esch Cummins Act; industry a Fordney-McCumber tariff, and yet Mr. Coolidge vetoed the McNary-Haugen bill, the same week he signed the bank bill and raised the tariff on pig iron 60 per cent."

Finally, the speakers at the conference expressed the belief that present leaders of the farm organizations behind the McNary-Haugen bill will not accept the so-called "Administration farm proposal" given out from the President's summer residence in the Black Hills.

"This year," said Mr. Wallace, "I have been astonished at the frequency with which conservative farmers make such a statement as follows: 'I was raised a Republican and have always voted the Republican ticket, but—' And they go on to enumerate their particular grievances and what they intend to do about it."

Co-operating With Labor

"There is a place for a party composed of western and southern farmers which will co-operate at times with eastern laboring men to ask

SIR ARTHUR WILBERT

INDUSTRY HEADS
OF NEW ENGLAND
GOING TO SCHOOLShort B. U. Course Offers
Theoretical and Practical
Study of "Big Business"

In line with the campaign being waged for the promotion of New England industries, the Associated Industries of Massachusetts and the Boston University College of Business Administration, co-operating, will conduct an executives' training conference at the College of Business Administration from Aug. 29 to Sept. 2, it announced.

A series of forenoon meetings at the university, afternoon trips of inspection to near-by industrial plants, and evening conferences at the University Club has been arranged. The institute will be conducted in two divisions, each meeting for the most part separately. One will consider the problem of production and the other will study distribution. The first will be directed by L. S. Harding of the Associated Industries and Prof. Ralph G. Wells, head of the management department, B. U. College of Business Administration, while the latter will be conducted by E. Grosvenor Plowman of the Associated Industries and Prof. Oscar T. Smith, head of the sales department, College of Business Administration.

Plant to Be Inspected

Cost reduction and expense control and forecasting and quota maintenance will occupy the two divisions respectively on Wednesday, followed by a joint trip through the plant of the Norton Company in Worcester.

On Thursday standardization and quality maintenance will hold places on the production division program and broadening of market and selling improvements will fill the forenoon session of the distribution division. The former will visit in the afternoon the Boston Consolidated Gas Company, the Mystic Iron Works and the Merrimack Chemical Company's plant, while the distribution men will visit the United Drug Company.

Personnel and wage policies and customer relations are on the programs of the two groups for Friday, these sessions all being scheduled to be held at the recreational center of the Edison Electric Illuminating Company, which will be inspected.

TAX RATE TO STAND

WEST SPRINGFIELD, Mass., Aug. 24 (Special)—The tax rate for this town will continue at \$89.00 on \$1000 valuation for the coming year, as the result of a vote taken at a special town meeting last night, appropriating \$58,000 from the town's excess and deficiency account toward the budget.

CANCELLATION SUSTAINED

The Board of Appeal under the motor vehicle liability insurance law today sustained the Globe Indemnity Company in its cancellation of a policy issued to Maj. Henry L. Norton of Winthrop, finding that the cancellation was reasonable and proper, and that Major Norton is not a proper insurance risk.

CITY'S TAX RATE
PLACED AT \$30;
REDUCED BY \$1.80Drop Due, Says Mayor, to
Less Expense, More Revenue
and Low ValuationLARGE SAVINGS MADE
BY CONTRACT TEAMINGLargest Decrease Since 1899,
but Does Not Meet \$4.20
Made in 1885

Boston's new tax rate for the fiscal year is \$30 according to an announcement made by Mayor Nichols today. This is a drop of \$1.80 from the 1926 tax rate and is the first marked downward movement in tax rate reduction since 1899 when it dropped from \$31.60 to \$13.10. This is the largest tax-rate drop since 1885 when the rate was reduced \$4.20, or from \$17 to \$12.80.

Mayor Nichols said that the reduction is due to reduced expenditures, to increased revenues and with the smallest increase in valuations since 1921.

The veto of a 1923 school surplus which the Mayor and two minority members of the school board said did not belong in the 1927 budget, cut the rate over 10 cents.

An analysis of items entering into city maintenance discloses that savings of approximately \$400,000 have been realized in 1927 in the hire of teams and trucks from outside contractors, in the purchase of motor equipment for the fire and public works departments, and in the amount of the special 10 per cent tax which in recent years has been levied in connection with loans issued outside of the debt limit of the city.

City Debt Increase Explained

The Mayor points out that part of the reduction in city maintenance is due to a curtailment in the pay-as-you-go policy in street reconstruction, which the city was forced to make as a result of the reduction made by the Legislature in the tax limit request of the city. The reduced tax limit allowed little for street repairs. In recognition of the pressing need for street repairs a loan of \$500,000 was made available.

An increase of close to \$500,000 in city debt requirements may be attributed he says, to several factors largely beyond the control of the Mayor. The tendency on the part of the Legislature to shorten the term of municipal loans, the large amounts borrowed in recent years outside the debt limit of the city for street widening, and for other items of permanent nature have made it necessary, it is explained, to provide additional appropriations to meet debt requirements.

School maintenance requirements, as finally fixed by the school committee, says Mr. Nichols, show an increase of approximately \$641,000 over similar requirements in the previous year, despite the cut of \$200,000 caused by the Mayor's veto. Chapter 214 of the Acts of 1925 authorized the school committee to appropriate within the years 1926 to 1929, inclusive, \$10,000,000 for additional land and new school buildings.

Under the provisions of the act the amount to be included in the tax levy of each of the four years was fixed within certain minimum and maximum limits. The minimum fixed for 1927 was \$3,500,000, and, since, in the opinion of the school department, this amount represents the limit of possible expenditure by the department during the year, this figure rather than the maximum \$4,000,000 authorized by law was included in the tax levy for 1927.

Japanese Tourists
ON TOUR OF BOSTONAlso Visit Harvard and Other
Points of Interest

Arriving in Boston yesterday from Niagara Falls a group of 23 Japanese tourists today visited the Art Museum and Harvard University, as well as other points.

The party, since leaving Yokohama, Japan, has been traveling for 28 days. They eluded the United States at Seattle, toured the Yellowstone Park, and stopped for a short while in Chicago. After leaving Boston they will go to New York, Philadelphia, Atlantic City, and Washington before starting westward again.

The Japanese Travel Bureau has had charge of the arrangement of the tour. The party is to be back in Yokohama in another month. They will sail from San Francisco.

LIGHT PATRONS GET DISCOUNT

HARTFORD, Conn., Aug. 24 (AP)—Sharing its prosperity with 63,000 customers, the Hartford Electric Light Company will give a 40 per cent discount on October bills. The board of directors has authorized the discount as a "customer's dividend" the amount involved being about \$200,000.

"Despite the fact that our share of the State tax in 1927 remains the same as that in 1926," says the Mayor, "the tax warrants received from the State this year show an increase of approximately \$365,000 over those of the previous year. This excess may be allocated directly to three items coming within the control of the Metropolitan District Commission. Appropriations during the current year for Metropolitan Park purposes total \$1,225,789.21, and are approximately \$30,000 in excess of similar appropriations in 1926.

"Boston's share of the cost of construction of the River Street Bridge, extending over the Charles River between Brighton and Cambridge, has been fixed at approximately \$140,000, and is included in this year's tax levy. Under the terms of the act authorizing the construction of the Southern Traffic Artery, there is included in this year's tax levy, approximately \$260,000, representing Boston's share of the first year's cost of construction of this highway.

"Boston as the center of the Metropolitan District is each year called upon to levy increased amounts for improvements within the Metropolitan area. What Boston's share of the benefits which may be said to accrue from these improvements is in direct proportion to the share of the expense which it bears is a matter of conjecture.

Low Increase in Valuation

Included under the heading of revenue are the following items: (Continued on Page 4B, Column 4)

SINN FEINERS WILL NOT ENTER FREE STATE DAIL

Miss McSwiney Declares de Valera Has Disgraced Himself—Situation Uncertain

By Wireless via Postal Telegraph from Halifax

DUBLIN, Aug. 24.—The future of the Cosgrave Government depends on the result of the two by-elections today. If the Government loses, the Dail will be surrounded and either an immediate general election held or Thomas Johnson, Labor Party leader, will be elected president of the executive council. There is just a possibility—seemingly very remote—that an effort will be made to elect Eamon de Valera to that office by obtaining the support of a number of the present Government's followers.

So many surprising things have happened during the past few weeks that one cannot rule out even this contingency. Determined efforts have been made to induce the six recalcitrant Sinn Fein members of the Dail Eireann who still remain outside the House to take the oath and occupy their seats, and it is reported that the overtures have been seriously considered by some of them. The success of these efforts is doubtful but if they did succeed, it would put an immediate end to the Cosgrave government.

Situation Is Fantastic

The six non-members are Austin Stack, Dr. Madden, Prof. Arthur Clery, Mrs. Cathal Brugha, Oscar Traynor and David Kent. Their entrance to the Dail would give the opposition a majority of five exclusive of the doubtful John Jinks.

Although as the Sinn Fein party admits, the present political situation is fantastic, it is "becoming a little clearer." There seems to be no indication that there can be an effective coalition to replace the Cosgrave administration, should it resign. The triple alliance of labor, Flannery and the National League is already dissolved with its component parts, as the only thing they had in common was the desire to oust the Cosgrave government. Neither Capt. William Redmond, leader of the National League nor Mr. Johnson are prepared to endorse Mr. de Valera's avowed intention to abolish the oath if he gets into power. Mr. Johnson bluntly says that the Labor Party has no intention whatever of putting Mr. de Valera into office, deciding a week ago not to support Mr. de Valera if he is nominated as president.

"To do so," says Mr. Johnson, "would be to nullify our attempt to bridge the gulf that has divided the Nation into two bitterly contending sections with such disastrous results." Captain Redmond also denies that the National League will support any bargain with the Sinn Fein or Labor and under no circumstances would the Irish Nationalists help Mr. de Valera into power, and they would strenuously oppose any effort to alter the Constitution.

Sinn Feiners Not to Enter
Meanwhile rumors of the contrary notwithstanding, The Christian Science Monitor representative is assured that the six Sinn Feiners intend to stay outside the Dail. They declare they will neither take the oath nor recognize the Free State Parliament. They admit, however, that the public mind has been so shaken with surprises and that political morality has been so lowered that explicit statements are necessary.

The Sinn Fein leader, Miss Mary McSwiney, declared that the bitterest thing they had encountered

Charles Heiss, General Manager

120 Madison Ave. to hotel of distinction

since the treaty itself was that a man, whom they revered should have "so disgraced himself" as to take the oath as Mr. de Valera and his party had done. Mr. de Valera admits that what he did was contrary to his declared policy and explicit pledges, and was a step painful and humiliating to them all. He declares, however, that it was their duty to take such a step even though it could easily lower the standard of public faith which at present was by no means high. According to him unless they had gone into the Dail all thought of securing Irish unity and independence by peaceful means would have to be abandoned and the only alternative would have been armed revolution. Critics of Mr. de Valera, commenting on his statement, say that it is a pity he did not realize all this in 1922 and save the country much waste of life and treasure. At present Cosgrave points out, Ireland today would be one of the most prosperous nations in Europe if it had not taken the Republican leader five years to do the right thing even if he did it in the wrong way.

MR. BALDWIN RETURNS HOME

Sympathetic Reference Is Made to First Visit of a British Premier Overseas

By Wireless via Postal Telegraph from Halifax

LONDON, Aug. 23.—Stanley Baldwin, Prime Minister, returned this afternoon and was received at Waterloo Station by the members of his Cabinet still in London. The Premier's three weeks' visit to Canada was the first paid by any Prime Minister of England while in office to any overseas Dominion, and his home-coming afforded an occasion of much sympathetic reviewing of Commonwealth relations. It is felt that the equality of political status now shared by the Dominions with Great Britain renders imperative more frequent personal contact between the chief ministers of the state.

The Times says: "It is almost a corollary of the new imperial system that while the Government at Whitehall conducts the major share of the Empire's relations with the other powers, every opportunity should be given the peoples overseas to realize that it is being conducted by men whose aims for the Empire are worthy of their trust."

The Daily News says: "Mr. Baldwin has done good service abroad."

NEW HAMPSHIRE LEGION CONVENES

WEIRS, N. H., Aug. 24 (Special).—At the annual convention of the Hampshire department of the American Legion and its affiliated societies, Mrs. Irene M. Walbridge of Peterborough was nominated for national president of the Legion auxiliary. Mrs. Walbridge, who has divided the Nation into two bitterly contending sections with such disastrous results.

COMMERCIAL LAW LEAGUE IN CONVENTION

Members Consider Questions of Professional Ethics at Atlantic City

ATLANTIC CITY, N. J., Aug. 24 (Special).—The Commercial Law League of America, now holding its thirty-third annual convention here, went on record as protesting against the adoption of the proposed additional canons of ethics of the American Bar Association.

A resolution which was adopted by the convention after considerable debate, read as follows: "Be it resolved by the Commercial Law League of America that on behalf of the members of the league whose interests are so vitally affected by these proposed canons of the American Bar Association, that the president of the Commercial Law League be directed to appoint a special committee to prepare a suitable memorial to be submitted by the Commercial Law League to the American Bar Association protesting against the adoption of these canons, and that the Commercial Law League define the code of ethics between members of the league with each other and the members of the league—lay and legal members—with their organizations."

George Wentworth Carr of Philadelphia was appointed chairman of the special committee, which is expected to offer the memorial to the convention for adoption this afternoon.

Lawyer's Responsibilities

J. Purdon Wright of Baltimore, chairman of the special committee on ethics of the league, in presenting his report to the convention declared that "the professional services of a lawyer should not be controlled or exploited by any lay agency, personal or corporate which intervenes between client and lawyer."

Mr. Wright's report said that a lawyer's responsibilities and qualifications were individual. "He

should," he said, "avoid all relations which direct the performance of his duties in the interest of such intermediary. The relation to the client should be personal and the responsibility should be direct to the client."

In regards to bonding the fidelity or integrity of the lawyer Mr. Wright said that "lawyers should not pay for nor permit others to secure their employment or offer their services by giving or procuring bond to insure the faithful performance of their professional obligations."

Another section of the committee's recommendation is that "The lawyer should not stir up litigation nor solicit nor permit to be solicited for him any professional employment nor sanction the exploitation of his services by any one." Self-advertisement was branded as commercial and as tending to lower the sense of professional dignity.

Following the presentation of Mr. Wright's report, Charles A. Boston, of New York, chairman of the committee of ethics of the American Bar Association, reviewed in detail the history of the formation of the canons of ethics for the judiciary which were promulgated by The American Bar Association. He then explained the proposed canons, with particular emphasis to those relating to bonding attorneys and sharing professional fees with intermediaries.

Teaching of Commercial Law

The committee on education in its report presented by Edwin A. Krauthoff of Kansas City declared that a canvass of the law colleges of the United States had disclosed that most of them complained of crowded curricula and that the curriculum arranged one or more years in advance, and for these reasons they explained their inability to accommodate or allow time for proposed lectures on the practice of commercial law.

The only conclusion the committee could draw from these experiences he declared, was that "the needs of many law colleges to whom the offers of lectures was submitted have no adequate conception of the value of the lectures, and, perhaps in a few instances harbor prejudice against anything practical or commercial being taught in the law school. Recommendation was made that Mr. Wright's report be done among the deans of various law schools."

Smaller Telescope to Do Work of Largest by New Discovery

Change in Design of Mirror Is Claimed to Enable Astronomers to Get Same Results With Instrument of 60 Per Cent Less Size

PASADENA, Calif. (P).—Astronomers have discovered that in making the world's largest telescope they made it much larger than was necessary. The 100-foot dome which houses the 101-inch mirrored telescope at Mount Wilson Observatory, above Pasadena, could just as well have been only 40 feet to house an instrument approximately 60 per cent smaller, according to Dr. G. W. Ritchie who designed the record-breaking apparatus. The smaller size, he said, would have been equally effective.

The discovery will have no effect on work now progressing on Mt. Wilson. Dr. F. G. Pease of the observatory staff, said after receiving information of the new finding from Dr. Ritchie.

Practical importance of the discovery lies in the greatly reduced possible cost of constructing still more powerful telescopes. Dr. Pease said. A model embodying the new plans, has been constructed and named the "aplanatic telescope." Like the large Mt. Wilson instrument, this is of the reflector type in which a mirror takes the place of some of the usual lenses. A concave mirror reflects the starlight back toward the star to a smaller mirror from which it travels back again, through a hole in the larger mirror, to the eye of the observer. The designers found a new method of making the mirrors, thus reducing the length of the telescope. In the model, the mirror is about 16 1/2

inches in diameter, though the entire telescope is less than four feet long. Dr. Pease has suggested plans for an instrument with a 300-inch mirror to cost approximately \$13,000,000.

Dr. Michelson to Resume Studies on Speed of Light
CHICAGO (P).—Prof. Albert A. Michelson, physicist of the University of Chicago, who recently measured the speed of light at 186,263 miles per second, will continue his studies in California next month. Two large, specially constructed mirrors, on the summit of Mount San Jacinto and the other about 80 miles away on Mount Wilson have been installed for the tests. Last year, Prof. Michelson conducted his experiments in the same region with the mirrors about 22 miles apart.

The experiments to be conducted next month are in the nature of a verification of his previous figures. Flashes of light are sent from one mirror to the other and the speed is measured by the physicist with a delicate instrument known as an interferometer.

VERA

As the 18th century drew to a close . . .

cabinet makers of England and America were developing a wealth of interesting forms that are the admiration of collectors today. Among the choicest are the Danersk Subdurey pieces for the bedroom, of which the bureau is a part.

Drawer fronts of beautiful San Domingo crotch mahogany with delicate inlaid bands around the edges—charming desks and tables—mirrors with moulded lattices and gilded eagles carved in pine! Many pieces patterned after designs by Duncan Phyfe! All can be seen at our showrooms. Modest prices, too!

NEW FORD PLANE HAS RIGID TEST

Ready for Mr. Byrd at Curtiss Field "Few Hours" After Leaving

Special from Monitor Bureau

NEW YORK, Aug. 24.—A new Ford-Stout all-metal, 10-passenger monoplane, flown from Detroit a few hours after it had been turned out of the Ford plant at Dearborn, has arrived at Curtiss Field, and will be used by Lieutenant Commander Richard E. Byrd to take the French Minister of Commerce, Maurice Bokanowski, to Toronto.

M. Bokanowski as French director of aviation, was official host to Commander Byrd in Paris just after the trans-Atlantic air flight, and when Commander Byrd learned that the French minister wanted to be in Toronto on Aug. 24 for the opening of the annual meeting of the Canadian Bar Association, and that a delayed start from France appeared likely to defeat this purpose, he began to make plans to aid his one-time host.

Commander Byrd got in touch with Edsel Ford, who is to be one of the backers on the proposed South Pole exploration trip, and learned from Mr. Ford that the latest Ford-Stout all-metal monoplane was just reaching completion at the airplane factory. The flying machine was turned out from the factory at 5:30 o'clock Monday afternoon. It was subjected to a hasty but successful test flight, after which William B. Stout, several Ford officials and the pilot, Harry Brooks, took off for Buffalo. In the meantime a telegram was dispatched to Buffalo to have the field illuminated. Through a misunderstanding the message was sent to Cleveland and that field was lighted all through the night, while the airplane made a landing on the Buffalo field in the darkness. Heavy weather prevailed at Buffalo, but the airplane later took off, reaching Curtiss Field yesterday at noon.

On the trip to Toronto Commander Byrd will act as "right hand" to M. Bokanowski and Mr. Brooks will be at the controls.

ZAGLUL PASHA HAS PASSED ON

Egyptian Premier Noted for Opposition to British

CAIRO, Egypt, Aug. 24 (P).—All the government offices were closed today, owing to the passing on yesterday of Zaglul Pasha, Nationalist leader and president of the Egyptian Chamber of Deputies.

Said Zaglul Pasha, attracted wide attention by his militant agitation for the complete independence of Egypt after the World War.

Expressing his dissatisfaction with the British protectorate over Egypt early in the war, Zaglul Pasha, although he remained quiet during the struggle, gathered about him a great

BENGAL DETENUS TO BE RELEASED

Governor Makes Statement at the Opening of the Legislature

By Wireless via Postal Telegraph from Halifax

CALCUTTA, Aug. 24.—Sir Stanley Jackson, opening the Bengal Legislative Council, said that he hoped that by the end of the year nearly all the revolutionary detenues would be released, "provided no untoward event occurred and conditions at present prevailing in Bengal continued and the conduct of the released justifies the action taken." Since the end of March, 30 out of 70 had been freed.

The Governor, referring to the legislative program, said that the Education Bill was not quite ready, but the need for dealing with popular education was obvious. While, in the last six years, the Government's annual expenditure on university education had increased by £180,000, the contribution to primary education had remained stationary.

Discussing the proposed 20-confidence vote on the ministers, the Governor said: "My duty is quite clear. In the case of an adverse vote, I shall accept the decision, and it may be necessary to prorogue to enable me to fill the ministers' places."

TEXAS COTTON GROUP TO HOLD FOR PRICE

DALLAS, Tex., Aug. 24 (Special).—Voicing opposition to such farm relief measures as the McNary-Haugen bill, members of the Farmers' Marketing Association of America have decided to hold their cotton this season for a minimum of 25 cents a bale unless changing conditions warrant a higher figure. The group agreed upon at a meeting at which a committee of farmers and bankers was appointed to assist in financing such members as needed loans to hold their cotton for the agreed minimum. The committee, which is already at work, announced that little difficulty is expected ample "Southern" money for holding the cotton.

Almost unanimous approval was given statements by George B. Terrell, state commissioner of agriculture and other leading farmers and bankers to the effect that the planter, aided by the co-operation of the business men must act for himself independently of any legislative measures for his relief.

On the trip to Toronto Commander Byrd will act as "right hand" to M. Bokanowski and Mr. Brooks will be at the controls.

CHICAGO FUND ASSURES CITY ITS ORCHESTRA

Popular Subscription Totaling \$30,000 in Sight—Artists to Get Pay Rise

Special from Monitor Bureau

CHICAGO, Aug. 24.—The Chicago Symphony Orchestra, faced with disruption because of the association's inability to meet the wage scale demands of the musicians' union, has been saved for another season, at least, by a popular subscription fund of \$30,000. Out of this fund the musicians will receive the raise from \$80 to \$90 in the minimum scale which they demanded.

James C. Pettillo, head of the Chicago Federation of Musicians, has announced that the fund was approaching the goal and he believed that it would exceed the quota set up. The union has signed a contract with the orchestra association and the Chicago Daily News has guaranteed the fund, he said.

Believes It Precedent
"This is the first time as far as I can learn that a popular subscription has been used to augment the income of an orchestra," said Mr. Pettillo. "Naturally we are pleased that the whole affair has been ended successfully. Even with this increase the musicians in the Chicago Symphony will be getting less money than they could earn with moving picture theater organizations."

As a result of the financial aid from the outside the orchestra association is going ahead with its plans for its thirty-seventh season. Subscribers have been notified that the season will start Oct. 14 and continue for 28 weeks. Conductor Frederick Stock is expected to call the first rehearsal for shortly after Sept. 1.

Chicago Opera News

CHICAGO (AP)—Green Bay, Wis., and Petoskey, Mich., rather than Munich, Paris and Berlin, are supplying the Chicago Civic Opera Company with its new voices.

Herbert M. Johnson, manager of the Chicago opera, announcing today the signing of six new singers for the coming season, emphasized that all are American born and educated, and that only two of the six have had any European experience.

"It is significant," he said, "that

The Treaty Oak, Austin, Tex., Which Poets, Editors and Public-Spirited Citizens Seek to Save for Historic Reasons, Is on Ground Now Highly Valuable for Building Lots. This Magnificent Forest Giant Was 65 Years Old When Columbus Came to America and Has

each year we recruit more and more American singers and fewer foreign artists. Not only that, but they have been trained in this country. We are achieving independence from European musical influences.

New artists who have signed contracts for the season opening Nov. 3 are: Leone Krause, dramatic soprano; Chase Barone, basso; Olga Kargau, soprano; Elinor Mario, mezzo-soprano; Lucille Meisel, soprano, and Della Samoiloff, soprano.

Russia Seeks to Modernize Its Iron and Steel Industry

Soviet Engages United States Engineers to Help Rebuild and Adapt War Material Plants to Meet Farm Needs—Three Great Centers Are Planned

Special from Monitor Bureau

CHICAGO—Soviet Russia is literally beating its swords into plowshares, according to H. J. Frey, president of an engineering company bearing its name, which has just signed a contract with the Moscow Government to aid in modernizing its iron and steel mills.

The contract, which is signed by M. Ruchimovich, Minister of Industries, and approved by the Council of People's Commissars, provides that the American concern shall act as consulting engineer in the task of rebuilding the metallurgical industry of Russia. Since 1914 it has been capable of making only tools of war; in the future it is to turn out agricultural implements, structural steel, rails, and other steel products.

"Russia is turning to steel that it may return to agriculture and industry," explained Mr. Frey, who recently came back from Moscow. "During the war every metal-worked plant in the Tsar's realm was turned over to the manufacture of munitions and war necessities. After a few years of this diversion to military purposes, Russia began to experience an actual famine of iron and steel products."

"The country has never been a large consumer of pig iron, but it may be looked to as a great market for the future. Before the war Russia consumed only half as much iron per capita as did Austria, for example, and now Russia requires only a tenth of the pig iron per capita each year that is used in America."

"Russia is primarily an agricultural country, and the best way to accelerate farming is to supply proper implements. The Russian leaders feel strongly that the only way to do this is to renovate the iron and steel industry. The tools of the Russian peasant are limited. Farm machinery is obsolescent or worn out, and to supply this want it has been necessary to turn to foreign markets."

"The Government has a monopoly on the iron industry, and is going Estimates cheerfully furnished Jobbing

The famous Treaty Oak in Austin, Tex., is at present the object of vigorous efforts among poets, editors, and public-spirited citizens of the Lone Star State to interest all Texas in saving the tree as a historic relic.

This venerable patriarch of oaks stands near the banks of the Colorado River in the capital city and has been owned by Mrs. Walter H. Caldwell for 45 years. Now that the lots upon which it stands have become valuable city property, estimated at \$6000, the taxes are becoming burdensome to her but she does not wish to sell the lot for building purposes because this would necessitate the cutting down of the tree. It has been suggested that post cards of the tree be issued and sold until the tree "pays for itself," then a deed of the property be made to some civic or historical organization that will preserve the tree for its historic value.

Five Centuries Old Botanists of the University of Texas have estimated the age of the Treaty Oak to be 500 years. According to this calculation, it was a well-formed tree 65 years old when Columbus came to America. Its spread of limb measuring 120 feet is considered the greatest of any tree

exemplifying the dignity of the famous old oak follows:

THE TREATY OAK SPEAKS

By Hazel Harper Harris

Oh, not for beauty's sake do I invoke Your help that I may stand with surge and thrill

A living monument of towering oak, Where all around and Indian pledged good will.

No, not for beauty's sake, though I have stood Outlined against five hundred summer skies

While prairie winds untied my cloud tulle hood

And dipped it in a pot of sunset dye, Nor yet for duty done, though I have spread

My brooding boughs above small, timid fawns

In April rain, and I have comforted Sky travelers en route for southern dawn

If all the red birds that have built their nests Within my arms, snug, brown twig-furnished rooms

Should come on homing wings, their scarlet breasts

Would smother me like gay pomegranate blooms:

And on some sweet windy day in Spring, My bluebird children should come home to me

My arms would tremble with their mothering.

And every branch would boast a fleur de lis!

If I were needed now to make four walls

For one more Texas home, I would be glad

To give my life where humble duty calls: If I could make a chair for one we laid

With new red paint to make him cherish me

Or else a cradle for a baby's bed, Oh, I would give my life so willingly,

And feel with that old patriot who said His whole regret was but one life to give.

I am not needed for these home-sweet deeds.

My one important task is so to live That I may satisfy more spiritual needs.

Oh, let me lift my heart in living wood, That men in seeking me may pledge again

A sweet, enduring sense of brotherhood In every treaty made with other men.

Who knows when guarding angels hovering near

May seek a ladder in my lifting boughs.

And come to make a sleeping Jacob hear The voice of God renewing sacred vows:

And he, awakening with quickened grace, Will raise his pillow'd head from stony sod,

And say: The Lord is surely in this place. This is none other but the gift of God!"

THE TREATY OAK SPEAKS

By Hazel Harper Harris

Oh, not for beauty's sake do I invoke Your help that I may stand with surge and thrill

A living monument of towering oak, Where all around and Indian pledged good will.

No, not for beauty's sake, though I have stood Outlined against five hundred summer skies

While prairie winds untied my cloud tulle hood

And dipped it in a pot of sunset dye, Nor yet for duty done, though I have spread

My brooding boughs above small, timid fawns

In April rain, and I have comforted Sky travelers en route for southern dawn

If all the red birds that have built their nests Within my arms, snug, brown twig-furnished rooms

Should come on homing wings, their scarlet breasts

Would smother me like gay pomegranate blooms:

And on some sweet windy day in Spring, My bluebird children should come home to me

My arms would tremble with their mothering.

And every branch would boast a fleur de lis!

If I were needed now to make four walls

For one more Texas home, I would be glad

To give my life where humble duty calls: If I could make a chair for one we laid

With new red paint to make him cherish me

Or else a cradle for a baby's bed

SEA TRADE HAS SOUND GROWTH, REPORT SHOWS

Laid-Up Tonnage Decreases
but Observer Warns
Against Inflation

That the shipping industry, fundamentally, has made substantial progress toward stability; that the sea trade has increased steadily, if slowly; that shipping generally throughout the world is increasing, these are the optimistic views voiced by Harvey A. Sweetser, New England manager of the United States Bureau of Foreign and Domestic Commerce, who has just issued a report filed by A. E. Sanderson, of the Transportation Division of the Department of Commerce.

"If the output of tonnage is not inflated," says the report, "a balance between ships and cargoes will soon be restored. It does not seem probable, however, that a high degree of prosperity will be attained in the near future. The economic rehabilitation of Europe is proving to be a tedious process. Consequently, the overseas trade of that region, upon which shipping generally so largely depends, may only be expected to expand gradually."

"Shipping laid up throughout the world aggregated only 3,968,000 gross tons on July 1, 1927, and was 2,118,000 tons or 53 per cent less than on July 1, 1926. Reductions in the fleets laid up in the United States and in Great Britain were largely the cause of this decrease, which establishes a new low point in the history of the United States on July 1, there were 2,904,000 gross tons of idle shipping, which was 553,000 gross tons or 23 1/2 per cent less than a year earlier. In Great Britain, there were on July 1, 621,000 gross tons of idle shipping, which was 652,000 gross tons or 51 per cent less than on July 1, 1926.

"The world's supply of shipping increased slightly during the year. Idle shipping throughout the world aggregated only 3,968,000 gross tons on July 1, 1927, and was 2,118,000 tons or 53 per cent less than on July 1, 1926. Reductions in the fleets laid up in the United States and in Great Britain were largely the cause of this decrease, which establishes a new low point in the history of the United States on July 1, there were 2,904,000 gross tons of idle shipping, which was 553,000 gross tons or 23 1/2 per cent less than a year earlier. In Great Britain, there were on July 1, 621,000 gross tons of idle shipping, which was 652,000 gross tons or 51 per cent less than on July 1, 1926.

Several Silver Cups Awarded at the North Shore Flower Show

First Prize of Silver Medal Goes to Mrs. Moore of
Prides Crossing for Large Collection of Seedling
Tuberous Begonias Raised Out of Doors

MANCHESTER, Mass., Aug. 24 (Special).—Features of the North Shore Horticultural Show, which opened yesterday afternoon in the Horticultural Hall, and will continue through today and tomorrow, are a new seedling dahlia, Miss Cape Ann, a white bloom of the hybrid carnation variety with forked petals raised at the Lufkin dahlia garden in Gloucester, which is being shown for the first time, and which was awarded a certificate of culture; a display of aquatics, including the lotus flower of the Far East, raised at the garden of Mrs. W. H. Moore at Prides Crossing, and a large collection of seedling tuberous begonias, grown out of doors on the Lester Leland place at West Manchester, which, in addition to winning a silver medal as first prize, was awarded a silver cup, the gift of Daniel Low & Co. of Salem, as the most noteworthy exhibit in the show.

Other winners of silver cups were Mrs. H. C. Frick of Prides Crossing, whose table of cut flowers arranged for effect was awarded the silver cup offered by the North Shore Breeze, as well as a silver medal for first prize; Mrs. R. R. Frick of Manchester, whose collection of vegetables, 12 distinct varieties, won the silver cup offered by W. Atlee Burpee of Philadelphia; and Mrs. H. L. Higginson of West Manchester, to whom was awarded the silver medal of Beverly Farms, for the best collection of vegetables, 18 distinct varieties.

Won Several Prizes
Exhibits from the gardens and greenhouses of Mrs. W. H. Moore of Prides Crossing, won several prizes, including first prize for a group of plants arranged for effect, covering 50 square feet; first prize for a display of aquatics, for two specimen plants of Almandra, for two specimen palms, for six varieties of ferns, for six varieties of begonias, for the best decorative plant; a silver medal, first prize, for a collection of all classes and varieties of roses; other first prizes in cash for roses and vegetables; and a second prize for a rare fern. Just a year old, raised from spores brought by a friend from India.

In addition to first prize for vegetables, Mrs. H. L. Higginson won first prize of \$10 for a group of hardy and half-hardy perennials and annuals, arranged as an old-fashioned garden, enclosed by a white picket fence, within 50 square feet; several first prizes in cash for begonias; for three specimen geraniums; for three specimen fuchsias; for six rare flowering plants; for sweet peas, calendulas, dahlias and roses.

Miss Amy Curtis of Manchester was awarded a certificate of merit for a new seedling dahlia and a silver medal for the largest and best collection of named varieties of dahlias, beside first prize for 12 named varieties of the cactus type.

Basket of Dahlias
A \$10 gold piece offered by Andrew Lufkin of Gloucester was awarded to Mrs. C. E. Cotting of West Manchester for a basket of dahlias, arrangement and blooms counting for 50 per cent each. Mrs. Cotting also won first prize for a table of dahlias. Two perfect bunches of black grapes, raised at the C. E. Cotting place in Beverly Farms, were

CAR INSURANCE ISSUES RAISED

Rate-Cutting and Effect on
Summer Touring Are
Under Study

Automobile liability insurance problems so varied as to include the effect of the present zoned premium system on trucking competition, the unfairness of alleged price-cutting on the part of some insurance companies in the taxicab business and the effect of compulsory insurance on summer tourists in Massachusetts were covered in the afternoon session of the hearing yesterday before Wesley E. Monk, State Insurance Commissioner, on compulsory insurance rates, after a morning devoted mainly to the taxicab insurance rate question.

H. D. Church, representing the Motor Truck Club of Massachusetts, claimed that the variation of premiums gives an unfair advantage to trucking companies, which have their headquarters in outlying parts of the State. The commissioner said he thought he saw an indication of possible reduction of the flat rate, but he pointed out that flat rates could not be used as a source of relief because two Attorneys-General had ruled that such rates were discriminatory.

As to the question of tourists being disturbed at the thought of having to arrange a special insurance policy for non-resident use in Massachusetts, Edward G. Stacy, representative of the Massachusetts Section of the New England Council, who raised the question, agreed with Commissioner Monk that the question is chiefly one of inconvenience and not so much a matter of expense.

The commissioner said he knew of some cases of what seemed to be rate-cutting on the part of some insurance companies, in answer to a protest on the matter, and said that he had tried hard to find a way to reach already unfairly underpaid rates. He thought he had discovered such a remedy.

The opinion was expressed also that it was unfair for the insurance companies to pay their brokers a commission of 10 per cent on the premium, which the law requires every motorist to take. Henry H. Stevens, president of the insurance brokers of Massachusetts, responded by saying, "Don't anybody run away from the idea that the insurance brokers are getting rich on this law. Commissioner Monk replied: 'I don't think the law contemplates anybody getting rich.'"

COLORADO RIVER ACCORD HELD UP

(Continued from Page 1)

titled to one-half the lower basin's share after Nevada has been given 3,000,000 acre feet a year. The compact calls for 2,500,000 acre feet to the upper states and 75,000,000 acre feet every 10 years to the lower.

The Arizona commissioner attacked the Boulder Canyon dam proposal, insisted on by California as a flood and silt control measure for the Imperial Valley section and which would be used for power and irrigation storage. Arizona claims that a dam on that site would limit the land it could irrigate and advocates a dam in Glen Canyon near the Utah-Arizona line.

After Arizona had completed its presentation, California offered a second proposal for division in response to a request of the upper-basin states after California's proposal that the division be settled by a commission, composed of a representative from each of the seven states and two engineers appointed by the President, had been vetoed by Arizona.

The new California plan follows: Arizona's right to the exclusive use of all water in its tributaries of the Colorado, amounting to some 3,000,000 acre feet a year, is recognized; California shall have 300,000 acre feet a year to care for present perfected water rights; Arizona shall be entitled to 253,300 acre feet annually and California 2,195,000 acre feet; the remaining water in the main stream shall be divided equally between Arizona and California, subject to the provision that any part of the allocation of either state not put to beneficial use within 20 years shall thereafter be subject to appropriation and use in either state.

California also offered to stand by the previous plan if the upper-basin states in 1928 and 1929. The new California proposal received considerable general discussion by the conference members, the majority of spokesmen indicating an opposition to the 20-year limit proposal for development. They believed that each state should be given 40 years, or until a general revision of the compact is made in 1962, to perfect development and apply its allocation to beneficial use.

In his talk, Mr. Maddock indicated that Arizona believed the Colorado River problem should be settled now and by the seven states concerned. He discounted the possibility of relying on the United States Supreme Court or Congress for a settlement. Both states have made definite propositions and now the upper basin delegates are expected to take a direct hand in the proceedings.

The upper-basin states, all having approved the pact, stand united in desiring immediate ratification by all seven states in order to protect their future rights against prior claims established by development in the lower section. Development on the upper reaches of the Colorado will come many years later than on the lower. Gov. George L. Derr of Utah, chairman of the conference, announced the upper-basin meeting, stating that it was hoped that a compromise satisfactory to both California and Arizona could be drawn.

GOVERNOR BREWSTER REVIEWS ARTILLERY

CAMP DEVENS, Mass., Aug. 24 (AP).—Governor Ralph O. Brewster of Maine came to the camp yesterday

to review the 153d Field Artillery of Maine, engaged in a 15-day tour of duty here.

The Governor was accompanied by Adj.-Gen. James W. Hanson of Maine and Lieut. Carl F. Morrison, his secretary. He reviewed three batteries from Androscott County, with a personnel of 350 men.

CITY'S TAX RATE PLACED AT \$30

(Continued from Page 1)

Estimated income of city departments, surplus cash on hand at the beginning of the year, estimated income and surplus, corporation taxes received from the State, the city's share of the state income tax, and poll taxes. In 1926 these items totaled \$10,927,761.06. The corresponding total for 1927 is \$11,985,454.70.

"The total valuation of the city, as determined by the assessors, for 1926, was \$1,398,654,900. This valuation was made up as follows:

Real Estate \$1,728,305,200
Personal Property 169,745,700

"The valuation of the city for 1927, as determined by the assessors, is \$1,831,431,300. A segregation of this total is shown in the following table:

Real Estate \$1,762,846,700
Personal Property 168,584,600

"From these figures it is apparent that the increases in valuation secured by the assessors for 1927 amount to \$33,376,300. This increase is the smallest increase since 1921.

"Very often reduced tax rates are secured largely by forced increases in assessed valuations. A reduction in the tax-rate, combined with a forced increase in valuations, brings no worthwhile benefit to the taxpayer, since the net saving reflected on his tax bill is negligible. It is only when the forces of decreased expenditure and increased revenue combine with justifiable increases in valuations that actual savings will accrue to the taxpayer through a reduction in the tax-rate.

SUMMER CLASS MAKES NEW COLUMBIA RECORD

(Special from Monitor Bureau)

NEW YORK.—More than twice as many women than men attended the summer session of Columbia University just closed. According to the report of Edward J. Grant, registrar, the attendance of 13,857 was a record.

The enrollment showed 9803 women and 4055 men, most of them teachers, including three college presidents, 358 principals, 256 supervisors, and 171 superintendents of schools. While a majority of the attendance was from the North Atlantic States the report shows that 63 students came from the insular and noncontiguous territories. Canada has the largest contingent from other countries with 132, China contributing 40 and Japan 20.

MRS. ROOSEVELT BUYS PUTNAM INN

PROVIDENCE, R. I., Aug. 24 (AP).—The historic General Putnam inn at Brookline, Conn., was purchased yesterday by Mrs. Theodore Roosevelt, who will operate it as a hotel.

The property, known as Mortimer Marlar to Miss Marion F. Thompson, who will be associated with Mrs. Roosevelt in the venture, and the latter in turn deeded it to Mrs. Roosevelt. Since her return from a trip to South America last winter Mrs. Roosevelt has lived in Danielson, Conn.

STREET RAILWAY SOLD

NEW BEDFORD, Mass., Aug. 24 (AP).—Sale of the New Bedford and Onset Street Railway Company to a New York group whose identity was not revealed for reasons of secrecy, by Elton S. Wilde, president of the Union Street Railway Company of which the Onset line is a subsidiary. The new owners plan to continue operation. Mr. Wilde asserted, thus setting at rest reports that the road was to be junked.

FAIRS TO MAKE IMPROVEMENTS

HARTFORD, Conn., Aug. 24 (Special).—Permanent improvements at Connecticut fairs are costing nearly \$30,000 this summer and spring, according to a survey recently completed by the State Department of Agriculture. At Danbury, Conn., more than \$17,000 will be expended for new cattle barns, added machinery exhibiting space and increased parking facilities before the fair opens on Oct. 3.

NEW SCHOOL TO OPEN

NORTH ANDOVER, Mass., Aug. 24 (Special).—It was announced that the new Brooks School will be officially opened on Sept. 29 with an enrollment of 20 students which will eventually be increased to 200. The new school, which is a branch of Gorton Academy, is situated close to the shore of Lake Cochichewick with an artistic background of natural scenery.

TAX LIST IS DECREASED

HARTFORD, Conn., Aug. 24 (AP).—Tax assessors working over the lists for this year have found that there will be a decrease of between \$350,000 and \$400,000 in the grand list of Hartford because of an act passed by the 1927 General Assembly exempting all parsonages from taxation. Heretofore parsonages had a \$5000 exemption.

MALDEN LIGHT RATE DELAYED

Following a public hearing yesterday at the State House, the Massachusetts Department of Public Utilities postponed a new rate schedule, asked for by the Malden Electric Company. The new rate was to have become effective Sept. 1. Postponement followed the request of the city solicitor of Malden for a delay so that the opposition could be heard.

VERMONT STAFF INCREASED

BURLINGTON, Vt., Aug. 24 (Special).—The College of Agriculture of the University of Vermont is to have three additional additions to its teaching staff the coming year. Prof. M. H. Campbell, late of the University of Illinois; Prof. R. W. Smith of the Massachusetts Agricultural College; and Prof. A. W. Lohman of the University of New Hampshire.

MINNEAPOLIS PARK SYSTEM IS EXPANDED

200 Acres of Marsh Land
Added—No "Keep Off
Grass" Signs in Evidence

(Continued from Page 1)

MINNEAPOLIS, Minn., Aug. 24 (Special).—Another link, a 200-acre tract of marshy land, is to be added to the chain of parks and boulevards which within the last five years have transformed the suburbs of this community, making it a recreational resort, a city of beautiful scenery and fine residences. The new development, to be undertaken next year by the Minneapolis Board of Park Commissioners, is expected to cost \$600,000. It involves the dredging of a swamp and the grading of a connecting creek valley.

Work of beautifying the surroundings of Minneapolis has been carried on for 42 years at a total cost to date of more than \$15,000,000, but it is in the last few years that the results of this work have become impressive to the visitor.

"Keep Off" Signs
In undertaking the improvement of this tract, Superintendent Theodore Wirth, who is president of the National Park Executives, is placing emphasis upon recreational facilities and the installation of parks, playgrounds, and parkways are not luxuries but rather essentials for every community and for the whole pleasure of its people.

In conformity with this policy the Board of Park Commissioners, during the past season the municipal orchestra, composed of musicians from the Minneapolis Symphony Orchestra, and directed by Engelbert Roentgen, assistant conductor of the symphony, attracted thousands each evening to the Lake Harriet pavilion.

A Singing Community
The early morning song conducted a competitive "community sing" in various neighborhoods. A silver trophy, presented by one of the newspapers, was the prize awarded to the community singing highest in pep, attendance and conduct. In some of the largest contests of the public, four 15-hole golf courses are operated without cost to the taxpayer, being sustained by the fees of the players.

Use of the parks is promoted by the Board of Park Commissioners. During the past season the municipal orchestra, composed of musicians from the Minneapolis Symphony Orchestra, and directed by Engelbert Roentgen, assistant conductor of the symphony, attracted thousands each evening to the Lake Harriet pavilion.

The early morning song conducted a competitive "community sing" in various neighborhoods. A silver trophy, presented by one of the newspapers, was the prize awarded to the community singing highest in pep, attendance and conduct. In some of the largest contests of the public, four 15-hole golf courses are operated without cost to the taxpayer, being sustained by the fees of the players.

Property value increases have exceeded the cost of this park system several times. The most beautiful residences in the city are built along the shores of the city lakes, Lake of the Isles, Lake Calhoun and Lake Harriet standing out conspicuously in this respect. Tracts of land in South Minneapolis, which were swamps a few years ago, have been transformed into valuable recreational centers, surrounded by beautiful homes in the city.

The Grand Rounds Boulevard, circling the lakes, passing through the largest parks in the city, along the Mississippi River and over Victory Memorial Drive, affords the best view of the city from the city's residential and business sections.

SOUTH AND WEST FOR NEW PARTY

(Continued from Page 1)

Just what our rapid exploitation of natural resources and growing industrialization is meaning in terms of well distributed terms of human happiness in the new era.

In action such a party may make mistakes, it may prove irritating to big business men. If the Democratic Party could revive in modern form its ancient traditions and cease to be merely a Solid South vote, it might in the course of the next 10 years put the Republican Party on the defensive.

Recent developments serving to bring about understanding between the two parties on the economic interests were explained by Mr. Peek. Farmers are on the eve, he said, of a broad realization of the essential community of interests among the producers of the great staple crops.

Attaching the record of the Administration on farm matters, he said the great surplus-producing agricultural states of the South, North, and West have a common interest in farm protection and stability "constituting a force powerful enough in its political expression to compel the adoption of an intelligent national program." He denounced the so-called Administration farm relief measure as a concealed subsidy.

LEGIONNAIRES TO GIVE FUND TO FRENCHMEN

A fund is to be raised during the voyage of the Massachusetts American Legion to Paris, as a gift to be used for disabled French soldiers. The fund is to be raised by the American Legion, which is on its way to France, under the leadership of its commander, named the following committee to raise the money: A. Platt, Representative in Congress, chairman; John D. Crowley, William McGinnis, Mrs. George W. Knowlton, Jr., Miss Mary T. Whitaker, Commander John W. Reiter, Charles T. Flynn and Adj. Dennis H. Haverly. Mr. McGinnis, a past commander, has been assigned to take care of the collections of funds on the steamship Lancaster; Mr. Flynn on the Martha Washington, and Adjutant Haverly on the Scythia.

Dr. William H. Griffin, department vice-commander, was today named chairman of the sailing committee, which will have charge of the leaving of the Massachusetts Legionnaires.

CIVIC SECRETARIES TAKE STUDY COURSE

E. J. Brehaut, manager of the civic bureau of the Boston Chamber of Commerce, is giving a course this week on street and highway traffic at the school for the National Association of Commerce and Organization Secretaries at Northwestern University, Evanston, Ill. He is also giving a lecture for first year students at the school on civic activities.

Edward O. Otis Jr., secretary of the New England Export Club of the Boston Chamber and of the foreign trade committee of the Chamber, is attending the school as a student. Representatives of the chambers at Haverhill, Worcester and Marblehead are also attending. Officials of the Boston Chamber, J. Paul Foster and B. R. Alexander, are graduates of the school.

SPRINGFIELD TEACHER LEAVES
SPRINGFIELD, Mass., Aug. 24 (Special).—Miss Elizabeth L. Neal, dean of girls and head of the English department at West Springfield high school for 17 years, has resigned to become an assistant in the English Department of the South Side High School, Newark, N. J.

Gen. Leonard Wood, who, he said, left the islands better governed "than many independent nations and some states of the Union, and practically self-governed, with more than 98 per cent of all the officials and employees of the Government Filipinos."

CHICAGO FACES \$6,000,000 PLAN TO CONSERVE LAKE

Committee Offers It on
Voting to Take Meters
From Houses

(Special from Monitor Bureau)

CHICAGO, Aug. 24.—Another chapter in the long controversy over Chicago's withdrawal of water from Lake Michigan was written here when the Finance Committee of the City Council voted to repeal the water-meter ordinance, removing all meters now installed in residences, and approving a compensatory plan to spend \$6,000,000 in the next five years to stop wastage of water.

Representatives of the sanitary district of Chicago protested against the action, anticipating reprisals from the War Department. The repeal ordinance now goes before the full council.

Members of the Finance Committee who opposed the repeal move asserted the matter had been previously settled several years ago. Then the War Department granted a permit to the Sanitary District to continue its diversion of lake water for the disposal of Chicago sewage with a requirement that Chicago cut down wastage of water by installing meters. Thousands of meters have since been installed in homes, frequently against protests of the owners, who are accustomed to paying a flat rate semiannually.

In his campaign for re-election, William Hale Thompson, Mayor, made removal of the meters a plank in his platform. The Council committee's action was taken in the line of fulfillment of the Mayor's pledge.

What moves the War Department will make have not been indicated. Col. E. H. Schulz, United States District Engineer at Chicago, has stated he had made his recommendations to the War Department in Washington on the subject, but has had no reply. He supposed the matter was being held for the decision of Dwight F. Davis, Secretary of War, who is in Europe.

Although Tacoma-Arica has no economic value to either country, national pride involved makes the issue, Dr. Shepherd said. "More dangerous to the peace and safety of the republics along the western coast of South America than ever Alaska-Arrica by its was for the nations of western Europe."

"The course of our relations with Mexico, Nicaragua, and the Tacoma-Arica matter in particular," he said, "seems to be marked by three successive grades of ineptitude, great, greater, and greatest. This ineptitude might be characterized more succinctly in these words, fust, force, and fizzle."

WOMEN TO WORK TO CLEAN STAGE

Kansas City Campaign May
Assume National Aspect
It Is Predicted

(Special Correspondence)

KANSAS CITY, Mo. (Special Correspondence).—A move for better attractions in the theaters, including motion picture houses, is to be made by women's clubs of Kansas City, the Society for Prevention of Commercialized Vice and the recreation division of the city government.

The combined forces will campaign against indecent shows, suggestive pictures and improper behavior by any persons in attendance at theaters. The Women's Council of Clubs will assist.

An important phase of the movement is a proposed city ordinance which would require every theater or other place of amusement to obtain a permit before a license could be granted. Under the terms of the ordinance the permit would be revocable by the city authorities if found objectionable the permit could be withdrawn at once. It then would have to be shown in court that the attraction was not improper, else the permit would not again be granted. At present, the city authorities must prove an attraction is indecent before a license can be revoked.

In a statement calling upon women's organizations to aid in this work the council of Clubs suggested the condition be dealt with was not local but national. The woman power of the Nation, by enlisting its services, could change the condition, it was said.

BY-ELECTION CALLED IN NEW WESTMINSTER

VICTORIA, B. C. (Special Correspondence).—The most important test of public opinion in British Columbia since the general election of 1924 will take place in the by-election at New Westminster, which will be held on Aug. 25. The by-election was brought on so suddenly that only nine days remained for campaigning between the announcement of the date and the opening of the polls.

On account of the Government's present narrow majority in the Legislature, the success of its candidate at New Westminster is highly important. The opposition party contends that a government defeat would prove disastrous to the Administration, as it would thus lose control of the Assembly.

On the other hand, the Government's present narrow majority in the Legislature, the success of its candidate at New Westminster is highly important. The opposition party contends that a government defeat would prove disastrous to the Administration, as it would thus lose control of the Assembly.

From Houses

(Special from Monitor Bureau)

CHICAGO, Aug. 24.—Another chapter in the long controversy over Chicago's withdrawal of water from Lake Michigan was written here when the Finance Committee of the City Council voted to repeal the water-meter ordinance, removing all meters now installed in residences, and approving a compensatory plan to spend \$6,000,000 in the next five years to stop wastage of water.

Representatives of the sanitary district of Chicago protested against the action, anticipating reprisals from the War Department. The repeal ordinance now goes before the full council.

Members of the Finance Committee who opposed the repeal move asserted the matter had been previously settled several years ago. Then the War Department granted a permit to the Sanitary District to continue its diversion of lake water for the disposal of Chicago sewage with a requirement that Chicago cut down wastage of water by installing meters. Thousands of meters have since been installed in homes, frequently against protests of the owners, who are accustomed to paying a flat rate semiannually.

In his campaign for re-election, William Hale Thompson, Mayor, made removal of the meters a plank in his platform. The Council committee's action was taken in the line of fulfillment of the Mayor's pledge.

What moves the War Department will make have not been indicated. Col. E. H. Schulz, United States District Engineer at Chicago, has stated he had made his recommendations to the War Department in Washington on the subject, but has had no reply. He supposed the matter was being held for the decision of Dwight F. Davis, Secretary of War, who is in Europe.

Although Tacoma-Arica has no economic value to either country, national pride involved makes the issue, Dr. Shepherd said. "More dangerous to the peace and safety of the republics along the western coast of South America than ever Alaska-Arrica by its was for the nations of western Europe."

"The course of our relations with Mexico, Nicaragua, and the Tacoma-Arica matter in particular," he said, "seems to be marked by three successive grades of ineptitude, great, greater, and greatest. This ineptitude might be characterized more succinctly in these words, fust, force, and fizzle."

WOMEN TO WORK TO CLEAN STAGE

Kansas City Campaign May
Assume National Aspect
It Is Predicted

(Special Correspondence)

KANSAS CITY, Mo. (Special Correspondence).—A move for better attractions in the theaters, including motion picture houses, is to be made by women's clubs of Kansas City, the Society for Prevention of Commercialized Vice and the recreation division of the city government.

The combined forces will campaign against indecent shows, suggestive pictures and improper behavior by any persons in attendance at theaters. The Women's Council of Clubs will assist.

An important phase of the movement is a proposed city ordinance which would require every theater or other place of amusement to obtain a permit before a license could be granted. Under the terms of the ordinance the permit would be revocable by the city authorities if found objectionable the permit could be withdrawn at once. It then would have to be shown in court that the attraction was not improper, else the permit would not again be granted. At present, the city authorities must prove an attraction is indecent before a license can be revoked.

In a statement calling upon women's organizations to aid in this work the council of Clubs suggested the condition be dealt with was not local but national. The woman power of the Nation, by enlisting its services, could change the condition, it was said.

BY-ELECTION CALLED IN NEW WESTMINSTER

VICTORIA, B. C. (Special Correspondence).—The most important test of public opinion in British Columbia since the general election of 1924 will take place in the by-election at New Westminster, which will be held on Aug. 25. The by-election was brought on so suddenly that only nine days remained for campaigning between the announcement of the date and the opening of the polls.

On account of the Government's present narrow majority in the Legislature, the success of its candidate at New Westminster is highly important. The opposition party contends that a government defeat would prove disastrous to the Administration, as it would thus lose control of the Assembly.

On the other hand, the Government's present narrow majority in the Legislature, the success of its candidate at New Westminster is highly important. The opposition party contends that a government defeat would prove disastrous to the Administration, as it would thus lose control of the Assembly.

TAX OFFICIALS WARNED AGAINST LOW VALUATIONS

Many Maine Towns Said to Follow Practice Hoping to Lower State Levy

PORTLAND, Me., Aug. 24 (Special).—Frederick S. Jordan, president of the New England State Tax Officials, and recently a member of the Maine State Board of Assessors, warns Maine municipalities against making the mistake of permitting their assessors to set too low a valuation on real estate and thereby create a seemingly excessive tax rate.

"This plan has long been followed by the assessors in a large number of towns," he said, "doubtless in the hope of lessening their state tax levy."

Mr. Jordan predicted that sentiment in Maine against enactment of an income tax law will continue, and that no serious attempt will be made to pass such a law. He believes, however, in the plan advocated by the Maine Federation of Agricultural Associations, to tax incomes of intangible securities.

"The present law permitting taxation of intangible property in this State is little less than a farce in its operation," he declared. "Although the State Constitution has been amended to permit taxation of stocks, bonds, and other intangibles at a less rate than is assessed on other property, the Legislature has never seen fit to pass a law providing for it."

Mr. Jordan recalled the report, made two years ago by a special legislative committee, that approximately \$22,000,000 worth of real estate in Maine is exempted from taxation. This amount is nearly 30 per cent of the entire taxable valuation of real estate in Maine.

He deprecated the practice, often resorted to by local assessors, of exempting from taxation a term of years new industrial plants. "The lure of a new industry," he added, "such as a shoe shop or a mill, is well nigh irresistible to town officials. We are in Maine exerting every effort to make this a manufacturing state, and aid and encouragement should be given freely toward industrial expansion. I believe, however, that to grant exemptions is not only contrary to law, but against sound public policy."

The industry may or may not be of a permanent nature. Municipal expenditures are increased to care for added costs of public services. To exempt such an industry throws the burden of taxation on the other property in the town, where there may be similar and competing lines, paying taxes and not in a flourishing condition. An industry too weak to pay its just share of municipal expenditures is of questionable value and doubtful permanency.

Mr. Ford to Build State Road in Sudbury at Cost of \$280,000

Massachusetts to Pay Motor Manufacturer Nominal Sum of One Dollar for Mile and One-Half of Modern Highway Near the Wayside Inn

Henry Ford, for the nominal sum of \$1, contracted yesterday with the Commonwealth of Massachusetts, through E. S. Leibold, his general secretary, to build, at a cost of about \$280,000, a highway one mile and a half in length, which will eliminate several dangerous curves and a serious situation at the entrance to his Wayside Inn in the town of Sudbury. The formal contract, whereby Ford becomes technically a road-builder for Massachusetts, was signed in the offices of the Department of Public Works by Mr. Leibold and William F. Williams, commissioner.

Mr. Williams said that this is the first case in the history of the State where an individual assumed the entire cost of building a state road of such importance to the public and costing so much money. Said the commissioner:

"It will not only be a great public movement, but also an example of the highest type of highway construction for the movement of a large volume of traffic comfortably and safely; an appropriate setting to the historical and educational features of the remarkable development Mr. Ford is carrying on in this locality."

Statement Issued

Explaining in detail the plans for the highway agreed upon by the State and Mr. Ford, the public works department issued this statement:

"The new highway to be built by Mr. Ford will be located to the south of and practically parallel to the present state highway known as the Boston-Worcester Post Road, from a point about 2400 feet easterly of the Wayside Inn to a point about 6000 feet westerly of said inn with a total length of about 8400 feet. Opposite the inn the new road will be about 550 feet distant but connected with it by a new road which will pass under the main highway and continue on to the south. At certain points the view of the country to the south will be extensive and interesting as the new road will be on much higher ground than the present road but the grades will not be extreme.

"The new road has been laid out as a state highway although the Commonwealth will be put to no expense for its construction as the entire cost will be paid by Mr. Ford who will enter into a contract with the Commonwealth to build the road as described and in accordance with the standard specifications of the department for this type of construction for the sum of one dollar with simple surety to insure its completion.

"The location of the new road will be 100 feet in width, with an improved surface consisting of a central way 10 feet wide of bituminous macadam, and a cement concrete way on each side of same, 10 feet wide with a 3-foot shoulder of bituminous macadam, and a grass plot 7 feet wide outside of the shoulders, making the total width of the improved roadway 59 feet.

"There will be a concrete bridge

From a Youthful Home Designer

Drawing by an 8-Year-Old Child in the Boston Public Schools of "The House I Would Like to Live In."

Children's Original Drawings Will Be Displayed at Bookshop

Miss Reed Outlines Aims of New Method in Art Instruction in Boston Public Schools Emphasizing Individual Impressions

Children of Boston's public schools are the artists of a collection of paintings and crayon drawings now on exhibition at the Bookshop for Boys and Girls at 270 Boylston Street. Exhibited first at Teachers' College of the City of Boston last spring they are now placed where the public may see them and thus become acquainted with the kind of art work being carried on in the city's schools.

These particular pictures are not studies but are free expressions of the child's own imaginations. The aim of the school is first to develop the ability of each child to define and express his thought in picture form as readily as he does with the spoken or written word, thus adding as it were a new kind of language, and second to encourage original pictorial thought. This includes careful training in execution or technique, but this idea is not imposed merely on the child but to aid him to

develop his own technique. From the beginning the child is given much opportunity to express his own ideas in his own way.

Subjects from Stories

He is given subject material, however, in various ways, by some incident, story or song which the class first discusses in more or less detail, then the pupils are asked to "make a picture of it."

Thus, there may be a dozen pictures recognizable as illustrating a certain general scene of a well-known fairy tale. No two are alike. Each depicts a little different action, color, or detail. Each picture may contain a tree. There are almost as many ways of depicting the tree as there are pictures of trees. One carefully indicates each leaf and each apple. Another is a mere swirl of green with one or two apples to show they belong to a tree. A third hand indicates a tree with a few strokes of pencil or brush. The young artists range from 6 to 14 years of age.

Miss Grace Reed, supervisor of art in the Boston schools, says, speaking of the work as presented by the exhibition: "When there has been a lesson in education to stress memory and accumulated information as standards by which to rate students it is pleasant to know that in a big school system there is recognition of the right of youth to express itself freely and joyously in painted pattern and picture making. The course in art education in the Boston public schools encourages individual, original work while conscious of the fact that its growth would be limited without a sufficient balance of training in observation and drawing for truthful representation of people, and other elements which enter into picture making."

HOLYOKE CAR FARE INCREASE DELAYED

Municipal Officials Ask Time to Study New Schedule

The effective date of a new rate schedule for an increase in fares of about 25 per cent sought by the Holyoke Street Railway Company was postponed yesterday by the Massachusetts Department of Public Utilities from Aug. 31 until Oct. 1 on petition of Mayor John F. Cronin of Holyoke, Mayor Cronin and Mayor John B. Shea of Chicopee and Aldermen and representatives of both cities asked for more time in which to study the proposed increases. They urged a public hearing later at which to present their views.

Mayor Cronin said he was "not arguing that the street railway should not be given more money," the question being how much it really needed. Several of the aldermen opposing the rate increase asked, said that in some cases the proposed fares would be raised 50 to 75 per cent. Many of the speakers said the company had good equipment and gave good service.

Louis Pellissier, manager of the railway, explaining the new schedule, said that the estimated annual increase in revenue would be \$175,000.

ALL-NIGHT PARKING RESULTING IN FINES

John J. McBride, chief of police of Cambridge, has been on active duty tagging cars for the past three or four nights in an effort to rid the streets of Cambridge of all-night parkers. The chief and his secretary, Charles P. Donelan, personally tagged 150 cars Monday night, and their officers are required to report in court.

Several days ago Chief McBride warned offenders that the ordinance prohibiting all-night parking would be strictly enforced. The first offenders were merely given advice when they reported at the traffic court, but now fines of \$5 are being imposed.

POULTRY GROWERS TO HOLD FIELD DAY

DURHAM, N. H., Aug. 24 (Special).—A field day and picnic will be held by the New Hampshire Poultry Growers Association at New Boston, on Wednesday, Aug. 31. There will be all kinds of games and sports in

the morning, an opportunity to go in bathing, tennis courts, horseshoe pitching, a baseball game, swings for the children, and there will be attendants provided to take care of and look after the children.

In the afternoon there will be speaking and the annual meeting of the Poultry Growers Association. "We are in hopes that all poultrymen will avail themselves of this picnic and come and bring the whole family. We will have lots of opportunities to talk over our business with each other and to get ideas as well as having a good time," says Robert Thaurrell, president of the Association, in the announcement of the meeting.

ROCK ISLAND'S LOADING CHICAGO, Aug. 24.—Chicago, Rock Island & Pacific Railway handled 10,458 revenue freight cars in the first 21 days of August, compared with 110,510 in the corresponding period of last year.

HEEL COMPANY TO MOVE

SALEM, N. H., Aug. 24 (Special).—The Legion Wood Heel Company of Haverhill has signed a lease with the owners of the Russ factory to occupy two upper floors for a year. This factory has been vacant since the Canobie Shoe Company went out of business several years ago.

Laboratory for Navigators of the Air

Architect's Drawing of the Daniel Guggenheim Aeronautical Laboratory at the Massachusetts Institute of Technology, Cambridge.

AERONAUTICAL STUDY BUILDING TO BE COMPLETED THIS WINTER

Structure at M. I. T. Given by Daniel Guggenheim Will Cost \$230,000 and House Equipment for Advanced Research in Aviation

The new \$230,000 aeronautical building at the Massachusetts Institute of Technology is under construction and will be ready for use by the students in aeronautics shortly after Christmas. The foundation work has been completed and the pouring of cement for the walls and floors will commence within a few days.

The building which was designed by Dr. Colidge and Carlson, architects, will be practically the first of its kind in the United States except for a somewhat similar building erected in California with a fund contributed by Daniel Guggenheim, the donor of the new building at Technology.

During the past few years the number of students specializing in aeronautical subjects at the Massachusetts Institute of Technology has increased so rapidly that the anticipated growth of this department within the next two or three years has made the new development necessary. Nearly 100 men are expected to enroll in the aeronautics courses this fall.

Buff brick and limestone will be used to make the appearance conform to the Technology building design. The aeronautical building faces Massachusetts Avenue and is located at the extreme rear of the campus. Ultimately it will be joined to the main plant, becoming one of the wings extending behind the dome.

Dr. Samuel S. Stratton, president of Technology, has already announced that tentative plans have been worked out for the buildings which will complete the wing. Construction of these, however, will not begin for several years.

Besides the basement there will be three stories, most of the space on the top floor being reserved for classrooms and offices. The building will be 150 feet long, and 80 feet deep. Two wind tunnels, which are now housed in temporary wooden buildings, will be moved to the basement and first floor of the new building. A working museum, library, drafting room, offices and locker rooms will occupy the remainder of the first floor. Two entrances, at either side of the front part of the building, will lead into the first floor.

Designed primarily for enabling the student to test wind pressures under various motor and propeller devices and for studying the theory of aeronautical dynamics, the plant will be equipped with every useful piece of machinery which can contribute to this end. A large

rigging laboratory has been provided for on the second floor, where also the drafting room, several offices, and research rooms will be located. Two classrooms and a drafting room, intended especially for graduate students will occupy the remaining space on the top floor.

Contract to erect an office building on Irving Street, Framingham, for the West Boston Gas Company will be awarded soon, according to Brown's Letters, Inc. Brick, tile, and limestone construction will be used for the two stories and basement. Charles M. Baker of Boston is the architect.

Contract has been awarded to the Sawyer Construction Company of Boston to build the Lehman Hall Dormitory at Williamstown for Williams College, Inc. It is to be of brick and limestone, fireproof construction, three stories high. Cram & Ferguson of Boston are the architects.

The Charlestown Five Cents Savings Bank has purchased the four-story brick building at 149-151 Blackstone Street, North End, from Harriet L. Baker. The total tax value is \$42,000, of which \$35,000 is on 1097 feet of land.

Mrs. John W. McGinley of New York City has purchased House Island, off Smith's Point at Manchester-by-the-Sea. Meredith & Grew were the brokers.

The five-story brick building and 850 feet of land at 88-90 Broad Street has been purchased by F. G. Mahoney. The property is assessed at \$34,000. C. W. Whittier & Bro. were the brokers.

VERMONT GRANGE MEETS IN OCTOBER

RUTLAND, Vt., Aug. 24 (Special).—This city will be the meeting place of the Vermont Grange annual convention Oct. 18, 19 and 20. It is announced by the executive committee.

Last year it was voted to depart from the custom of holding the convention in December, and the time was changed to October. The difficulty of transportation in the winter was one of the reasons for the decision. Several hundred delegates are expected at the coming convention.

STARS TO HELP LAY KEITH CORNER STONE

To Dedicate Memorial Theater to Vaudeville Pioneer

Noted actors and theatrical people, including Walter and Helen, Raymond Hitchcock, Fred Stone, and George M. Cohan, are expected to come to Boston for the ceremonies of laying the new Keith Memorial Theater's cornerstone. Located on the site of the old Boston Theater, between Washington and Mason Streets, near the original B. F. Keith Theater, the entrance to the new building will be on Washington Street.

Benjamin Franklin Keith, the pioneer and originator of modern vaudeville, began in a store near the Adams House in Boston with a single attraction, and developed from that the clean, entertaining amusement which he named vaudeville.

The great success of his work has unquestionably rested on the continuous, practical application of Mr. Keith's business slogan, "Cleanliness, Comfort, and Courtesy," to the show, to the playhouse, and to all the people concerned. He is credited with being the first to originate the continuous performance in the theater.

Mr. Keith began about 1882, and by 1886 he was able to buy the Bijou Theater on Washington Street. Eight years later he completed the B. F. Keith Theater. Meantime his interests had expanded into other cities.

It is said to have been one of Mr. Keith's ambitions to own and conduct "the cleanest, safest, most comfortable, most luxurious, and most beautiful theaters of each successive generation." In the construction of this memorial to him, E. F. Albee, his partner, is attempting to fulfill these requirements.

The theatrical people who are to participate in the exercises tomorrow are expected to arrive late tonight. Mayor Nichols is to receive them at the City Hall prior to the exercises tomorrow morning.

Field of Activity Covers Broad Scope—Millions Spent on Roads

Broad powers and the direction of vast public improvements affecting the commerce and transportation facilities of Massachusetts.

Supervision of a network of 1564 miles of state highways, extending throughout the length and width of the Commonwealth.

Registration of motor vehicles and aircraft and the licensing of motor vehicle operators.

Jurisdiction over the state-owned piers and port facilities and all tide waters, rivers and ponds.

Control over billboards and other outdoor advertising.

Two thousand employees, including engineers, clerical forces and labor at the height of the working season.

Total authorized expenditures this year of more than \$14,000,000.

Thereby the Department of Public Works is distinguished as the largest in personnel and expenditures and, of course, one of the most important cogs in the administrative machinery of the state government.

At the head of it is William F. Williams, commissioner, with two associate commissioners, Richard K. Hale and Frank E. Lyman.

Millions for State Roads

Development of the state highway system is one of the great undertakings of the Commonwealth. Extension of the routes that connect the principal centers of the many cities and towns and the maintenance and reconstruction of the older portions to meet the demand of the ever increasing weight and volume of vehicular traffic involve the expenditure annually of many millions of dollars. This year's appropriation for that work is approximately \$11,500,000.

Practically all that money comes out of the "highway fund" in the State Treasury, which is made up of the fees and fines received by the Registrar of Motor Vehicles, together with all contributions and assessments paid by counties, cities and towns, which in some cases meet a

share of the cost of road work done by the State.

One of the functions of the department is to co-operate with counties and towns in the improvement of "ways," according to a system by which the State pays a third, the county a third and the town or towns the betterment of routes that are important feeders to the main highway routes, and hence may be considered an integral part of them.

Helps Towns With Roads

Another co-operative feature of the department's work is the repair and improvement of public ways

which the State has selected state highways having a total length of 1150 miles to be kept clear of snow and ice, and town roads totaling 250 miles have been designated as the town's ways for the removal of snow in co-operation with the local authorities, who will pay a part of the cost.

The department has adopted the system of through interstate routes and types of warning, directional and information signs for use on all the federal aid system of highways throughout the United States, which were approved by the Secretary of Agriculture. Under authority of the Legislature, providing for the adoption of through ways, the department recently applied the "boulevard" plan to the Newburyport Turnpike, which requires all vehicles approaching from intersecting ways to come to a full stop, an experiment that has reduced the number of accidents on this route.

With its main office at Commonwealth Pier 5 in South Boston, the Registry of Motor Vehicles has branch offices at 11 different points in the State for the convenience of the motoring public. Inspectors of the registry investigate all accidents, report on violation of the laws and regulations relating to headlights, brakes and garages, and keep records of all dealers in new and used cars, as well as furnishing information for and prosecutions in court of violations.

Registrations Fall Off

Last year there were issued 835,439 registration certificates, 763,951 operators' licenses, while 153,053 examinations were given.

Charge of State Waters Is Another Duty—Employs 2000—Manages Piers

nations were given to applicants for licenses. The total net amount of money received by the registry last year and credited to the highway fund in the State Treasury was \$13,077,857.47. This year it will be somewhat under that figure. Up to July 31 the registration total was 737,243 and the number of licenses 535,138. The falling off is attributed by Frank A. Goodwin, registrar, to the operation of the Compulsory Liability Insurance Law.

The highway construction program, as outlined by Mr. Williams, aims to provide roads of types properly suited to traffic conditions and built to give the best possible service with a comparatively low maintenance cost.

Last year 222 miles of highway were built, of which 138 were new construction and 84 reconstruction. Of new roads 44 miles were gravel, 12 miles bituminous concrete, 57 miles bituminous macadam, 10 miles reinforced concrete, 12 miles gravel with bituminous treatment, and about a mile and a half were of earth. Of reconstructed roads 54 miles were of bituminous macadam, 19 miles bituminous concrete, 17 miles bituminous concrete, 17 miles reinforced concrete and the balance of miscellaneous types.

Oversight Over State Waters

The department has general care and supervision of all harbors and tidewaters within the Commonwealth, as well as of the Connecticut River and the non-tidal part of the Merrimack River, and is authorized to undertake any work for the improvement, maintenance, maintenance and protection of rivers, harbors, tidewaters and foreshores. It prescribes lines limiting structures in tidewater and licenses any structures to be built in tidewaters of great ponds.

Port facilities and harbor-front areas owned by the State include Commonwealth Pier 5, in South Boston, one of the largest steamship terminals in the country, 1200 feet long and 400 feet wide, capable of serving five ocean steamships at one time, with a two-story steel and reinforced concrete building equipped for handling freight on both floors and provided with heated passenger quarters on the second floor, as well as railroad tracks on the first floor for the transfer of freight between cars and wharf.

Pier Can House 800 Freight Cars

Connected with this pier is the Commonwealth railroad yard, with a capacity of 800 freight cars. The department operates this pier and during 1926 there were handled 400,000 tons of freight.

Commonwealth Pier 6 in South Boston, known as the Fish Pier, from the fact that it is leased to the Boston Fish Market Corporation, is the center of one of the largest wholesale fish markets in the country.

It may be noted that in the development and improvement of Boston Harbor, in the acquisition of land, reclamation of flats and construction of port facilities, the State has spent more than \$22,000,000 since 1859.

In 1924 the department adopted rules and regulations for the proper control of billboards and other advertising devices on public ways or on private property within the public view of any highway, public park or reservation, and under these regulations issues permits for the erection and maintenance of such signs.

SCOTS READY FOR PICNIC

Bagpipe contests, sword dances, exhibitions of the Highland fling and Highland dress competition, are included in the program for the Scottish picnic and games of the Associated Clubs to be held at Caledonian Grove on Labor Day, Sept. 5. This will be the thirty-eighth consecutive meeting of members of the Order of Scottish Clans.

Connected with this pier is the Commonwealth railroad yard, with a capacity of 800 freight cars. The department operates this pier and during 1926 there were handled 400,000 tons of freight.

Commonwealth Pier 6 in South Boston, known as the Fish Pier, from the fact that it is leased to the Boston Fish Market Corporation, is the center of one of the largest wholesale fish markets in the country.

It may be noted that in the development and improvement of Boston Harbor, in the acquisition of land, reclamation of flats and construction of port facilities, the State has spent more than \$22,000,000 since 1859.

In 1924 the department adopted rules and regulations for the proper control of billboards and other advertising devices on public ways or on private property within the public view of any highway, public park or reservation, and under these regulations issues permits for the erection and maintenance of such signs.

SCOTS READY FOR PICNIC

Bagpipe contests, sword dances, exhibitions of the Highland fling and Highland dress competition, are included in the program for the Scottish picnic and games of the Associated Clubs to be held at Caledonian Grove on Labor Day, Sept. 5. This will be the thirty-eighth consecutive meeting of members of the Order of Scottish Clans.

ANGORA GROWS FROM VILLAGE TO CAPITAL

Former Turkish Hamlet Is Being Rapidly Raised to Status of Great City

ANGORA (Special Correspondence)—It will be many years before Angora can boast of being one of the world's great capitals but those who are responsible for its choice, in preference to Constantinople, are certainly doing everything in their power to make it a favorably comparable with the smaller capitals in Europe. Its situation in the heart of Anatolia renders the task exceedingly difficult, but in spite of the obstacles encountered, praiseworthy results have been attained.

During the past year especially, remarkable progress has been made, and it is difficult to believe that the Angora of today is the same as that which, only a very short time ago, was nothing more than a typical Anatolian village with its war-torn habitations, burnt-out Armenian quarters, and deserted streets.

In the place of the latter one now finds wide, imposing-looking avenues and the most up-to-date houses and shops, public buildings and schools. The older inhabitants of the town are just becoming accustomed to the undreamed-of conveniences of running water and electricity in their houses, and within 12 months they will also have the use of gas. The speed with which the town is being built is amazing. The style of houses being adopted is, for the most part, German and Austrian, and the new suburb of Yeni Shehir has its prototype in the outlying districts of Berlin. Builders, architects and engineers are at a premium and are consequently simply piling money.

No Place for Idlers. The possessors of land are making immense fortunes without effort, while proprietors of houses of all descriptions are realizing astonishing profits with automatic regularity. Angora is no place for idlers; workmen are at their jobs soon after 6 o'clock in the morning and stay there, working at full pressure, until dark makes further work impossible. From morning till night there is an incessant stirring and a good omnibus service fulfills present transportation requirements. Amusements are practically limited to cabarets and these are of a very primitive order, with an occasional good musical concert by the President's band.

Service Flats Planned. Angora lacks a really good hotel, as there is now no place where more than sleeping quarters of only minimum comfort, but at exorbitant prices. Plans for the next two years comprise the building of modern service flats having their own shops and cinema, the laying out of numerous public parks and gardens, the construction of 45 kilometers of boulevard and many other improvements for the embellishment of the town. A wide belt of trees is also being planted round the town with a view to sheltering it from the devastating winds.

The municipality is hard put to keep up, financially, with the continual demands of these new projects, as its annual revenue does not exceed 3,000,000 liras of which 1,000,000 liras is contributed from Government funds. The amount of work yet to be done to complete the projects in hand is estimated at cost 30,000,000 liras but at the price now prevailing here that amount will not go far. Lack of experience has been responsible for the expenditure of vast sums of money to poor purpose, one instance being the first electrical central and distribution system which is having to be gradually replaced, owing to its inefficiency, by a completely new installation.

Foreign Experts Obtained. There is, however, a considerable change in the attitude of official departments on the question of calling in foreign assistance. The previous intractability shows a marked modification and the superiority of foreign executive and administrative specialists is now admitted and ap-

preciated in a more proper manner. In various branches foreign experts have been engaged to organize and direct the work of reconstruction on modern lines.

As for the Government departments, they are often working until as late as 8 p. m. and the various commissions having their headquarters in the Grand National Assembly appear to keep at work until the job in hand is finished. The summer vacations for Parliament will be short this year and fully occupied with the coming general elections and Popular Party Congress.

1500-Page Speech. A stirring speech, some 1500 pages long, will be pronounced by the President at the coming Popular Party meeting and preparations for its broadcasting are now complete. Information obtained here states that this discourse will comprise a glowing account of the Republic's history with severe reference to the reactionary incidents of last year. It is, furthermore, expected to include timely warning to those of oppositionist tendencies, though by the time the speech is delivered all oppositionists, and even many members of the Popular Party whose enthusiasm is considered as leaving something to be desired, will have found themselves elected to Parliament.

The contention is that by ousting the members of the opposition and those of the Popular Party to whom exception has been taken, all possibilities of delay in the Assembly's work by useless discussion and irritating objection will be completely eliminated.

The capital punishments of last year have had a tremendous effect and the opposition has since been absolutely quelled. But all the same it is considered expedient to banish from parliamentary affairs all those whose inclinations have been known to be not entirely popular. A keen military control is being exercised throughout the country but this, while serving the purpose of frustrating any attempt at insurrection, also guarantees security for the population and the inhabitants of regions previously troubled by tribal disputes the chance of devoting themselves to their work.

Cost of Rising. According to a recent article from the pen of a prominent deputy, the Kurdish rising cost the country some 10,000,000 liras, and thousands of workmen are at their jobs soon after 6 o'clock in the morning and stay there, working at full pressure, until dark makes further work impossible. From morning till night there is an incessant stirring and a good omnibus service fulfills present transportation requirements. Amusements are practically limited to cabarets and these are of a very primitive order, with an occasional good musical concert by the President's band.

State of Political Calm. This country is now enjoying a phase of political calm not previously experienced since its constitution as a Republic. Tewfik Rashed Bey, the Foreign Minister, declared to the writer that Turkey had now attained that satisfactory state of being at peace with the world and able, at last, to devote her whole attention to putting her house in order. The latter, he said, was an undertaking of no mean magnitude and one which taxed Turkey's financial resources to the uttermost. But he emphatically stated that under no circumstances would the Government have recourse to foreign loans. The Turks, he added, were firmly determined to keep well within their financial limits even if this meant delay in the realization of their plans and said they intended to follow to the

The Old and the New in Turkey's Growing Capital City

Angora, Like Australia's Canberra, is in Process of Rapid Transformation From a Mere Village to a Great Capital City. The New Turkish Capital is Erecting Buildings at an Extraordinary Rate, Foreign Experts, in Many Cases, Directing the Work on Modern Lines. The New Building Shown on the Left is the Grand National Assembly Hall. The Ruins on the Right Are Those of the Gateway of the Ancient Temple of Augustus.

letter the old Turkish proverb, "When in bed stretch your legs according to the length of the blanket."

Comparison of the present situation of the country with that of last year proves, however, a considerable all-round improvement and indicates a general putting of shoulders to the wheel. There are occasional instances of doubt as to which way to push, but as the will to progress is unanimous, there is reason to conclude that efforts will soon automatically synchronize and resolve themselves into the desired state of united force.

Good Roads and Neat Cottages Now Mark French War Area

District Around Dunkirk and Lille Has Recovered All Pre-war Industrial Activity—Ripe Grain Covers Former Scene of Devastation

Special from Monitor Bureau PARIS (Special Correspondence)—From the dunes on the northern coast to the forest of the Ardennes, northeast of Paris, the scene presented today is one of thriving industries and smiling fields. Ten years ago devastation stared at the visitor. The sailor from Antwerp, the factory worker from Flanders, the farmer from Picardy wondered if ever again trees would grow and flowers bloom by the wayside.

It is a perennial story, this of the reconstruction taking place in the former war areas. Every now and again, however, some incident draws attention back to what is happening in the northeastern corner of France. In this district, which revolves around the cities of Dunkirk, Lille, Lens and Arras, the destruction of factories, houses, roads and plowed acres amounted in some places to 70 per cent and in others to 100 per cent of the total, according to statistics and incident of war. Today production in many industries exceeds the pre-war and in most of the rest equals the pre-war. This was the richest mining and industrial part of France and has now more than recovered its former standing. There are trees where there were none before; there are cheery, comfortable cottages where there were once squalid tenements; there are gardens where there were once rubbish heaps; there are schools where once warehouses stood.

Growth of Dunkirk. One French writer, Pierre la Maziere, who went to Dunkirk to study the changes in that port, wrote that he found the port had an importance today far beyond the pre-war. Where 30,000 tons of iron products went through the port in 1913, there are now 1,500,000, to which may be added 400,000 tons of textiles. Grain, oil, and meat cargoes in great quantities now come to Dunkirk, whereas they were little seen before the war. There is a receipt to connect the port with the Rhine. When this takes place the minerals of Alsace will be exported via Dunkirk.

Lille is the cotton city. Not a perfect spindle, so they say, could be found there after the war. In the

MR. HOOVER FOR RIVER PROJECTS

Says They Can Be Built Without Preventing Tax Reduction

LOS ANGELES (Staff Correspondence)—Reduction of taxes and construction of the great engineering projects contemplated by the Federal Government can be undertaken at the same time, Herbert Hoover, Secretary of Commerce, declared here.

Building of the inland waterways system, development of the Columbia River Basin, protection of areas affected by the Mississippi and Colorado Rivers, construction of the St. Lawrence international canal and regulation of the Great Lakes level can all be accomplished without disturbing the national budget, he asserted.

"None of these projects," Mr. Hoover said, "has as yet reached the stage where vast amounts of money are necessary to be appropriated. All of them excepting those affecting the Colorado and Mississippi are in such state that only preliminary appropriations will be asked. Only about \$30,000,000 will be required annually to carry on work upon the proposed Boulder Canyon Dam and the Mississippi projects."

"The necessary thing is to establish harmony among various states of the Colorado River area touching the proper plan of proposed development. That such an agreement will be reached in the forthcoming conference of governors of these states is expected."

MUNIFICENT OFFER OF BOOKS TO SCHOOLS HALIFAX, N. S. (Special Correspondence)—Plans to place a library in every school of the Province of Prince Edward Island have been formulated by Adam Andrew of San Francisco, a former resident of the Island Province, who is now on a visit to his native home. On his initiative, the School Days' Library Commission has been organized.

The purpose is to place a bookcase, capable of holding 50 or more books, in every schoolhouse throughout the Province. These books are to be selected according to the catalogue of books recommended for public school libraries by the Department of Education of the Province. Over 400 schools are involved.

THE HOME FORUM

Garden Adventuring

WHEN one takes possession of an old house, and undertakes to restore its youth without robbing it of its aspect of venerable tranquillity, one has need of much sentiment and some imagination. It will scarcely do to dress the old place up in modern clothes and paint its face; a revival of youth is not to be obtained in that way. One must deal gently and sympathetically with it, recognizing its long-established idiosyncrasies. One needs to be quick to catch the faint sounds of ghostly footsteps in the rooms and to realize that past generations have bequeathed to it a character that no crass intruder may attempt with impunity to change.

And one should remember that the house itself is not the whole of the home, and that it might find itself very unhappy to awaken from its long sleep only to discover that all its surroundings had been altered. The hands which polished the windows and swept the hearth in the old house also planted gardens round about it, and old flowers still lie sleeping beneath the tangle of weeds and briars in the dooryard. I knew that there were peonies and rugosa roses in our yard, as well as old-fashioned roses both red and white, for they were still blooming bravely in the tall grass and needed only to be transplanted or given breathing space. My first genuine thrill of discovery came when I cleaned out an old tangle of grapevine with its tumble-down arbor. (That grapevine, by the way, refused to succumb to the ax. For ten years it continued to send up hopeful shoots until at last it won its victory. A new arbor was built and the young vines tied up, and the very first year it gave us a crop of delicious Concord grapes.)

It was while I was at work in this miniature jungle that I came unexpectedly upon a pink flower—a pure and heavenly pink. A closer inspection proved it to be an old-fashioned noisette rose. The single blossom was small and the plant feeble, but it re-

sponded to care and is now growing vigorously and rewarding us with its bloom.

That was my first adventure. The next was the discovery of a sweet William which appeared after the tangle had been cleared away. Who knows how long the roots or seeds had been lying dormant there? Beside it I found a mass of roots of golden glow.

Then I said, "There was once a flower garden here," and I proceeded to make a methodical exploration. As a result I now have narcissus and golden lilies and lavender bellflowers in my garden that are survivors of that old garden of the past, as well as columbines transplanted from odd corners (one, a magnificent double white, was growing in a rotted tree stump) whither they had migrated from that garden of old.

But of all these survivors of a past generation, the little Johnny-jump-ups or heart's-ease are the most persistent. One never knows where they may appear. I have discovered them in almost every place I have spaded up. Apparently the seeds have lain dormant for years and only need a little encouragement to call them into bloom. I love their little purple and yellow faces. I think I have never seen flowers that seemed to me so happy by just a little human care.

This means that pansies were once planted here, for the heart's-ease is an example of reversion to the original type. I was curious to know more about this and consulted my friend the horticulturist. He tells me that the pansy was developed from the heart's ease, which usually is classified as a distinct species, *Viola tricolor*, a native European wild flower. The reversion, he says, may occur in a single year, one or two of these "throw-backs" being produced in a pansy bed. But my little Johnny-jump-ups were bequeathed to me by pansy growers of long ago, and I am sentimental enough to keep them growing and perverse enough to prefer them to big varicolored pansies.

These are flowers that have loved the home place enough to stay here until a loving hand should give them another chance to bloom and praise their Maker, but there are more wayward flowers that prefer to stray. "Garden escapes," they are called, and one of my adventures is to run across them in unexpected places. Perhaps the most common of these garden wanderers hereabout is the orange day lily. I know of one railroad cut where they clothe the bank for a hundred feet, and they are often to be found in fields far from houses. My own lily slipped beside the doorsteps of an abandoned house, only to discover later that I had some growing in a spot of my own that was mowed every year so that they never bloomed. Transplanted here from that spot, however, have come again into their blossoming own.

Even more heterodox, from the refined gardener's point of view, are my adventures with vagabonds that have strayed into my garden from outside, like wild ducks that come to rest on the domestic pond. Every year or so a weed springs up which I allow to grow because I know it will bear flaming little magenta flowers. I do not know its name. I have identified the corn cockle, which has invaded my garden more than once.

Perhaps you do not know the corn cockle by that name, but would recognize it merely as a somewhat troublesome weed. It is a member of the pink family and may be described as an annual with a rather downy stem. The calyx is large and very hairy; the leaves are also hairy. The flower has five petals and is a rich reddish purple. I believe the corn cockle has been domesticated, but it was originally a native European plant which grew naturally in grain fields, as the poppy does, and was probably imported into this country with wheat. It is almost impossible to get the corn cockle seed out of wheat and the pretty flower is considered a pest in the wheat country. Very likely it was introduced into my garden through the agency of chicken feed, but with me it is a guest, nothing less.

Whether a flower is to be considered an aristocrat or a weed, it seems to me, depends entirely on the point of view. Take wild mustard, for example. It is the bane of many a farmer, yet is not a pretty plant? I have descended so far in my horticultural depravity as to welcome a few wild mustard plants in among my annuals while yet there was a dearth of yellow in the garden. Why not?

Bouncing Bet has had a curious in-again-out-again history. Originally a European wild flower, it was domesticated like the larkspur, and the foxglove and became a garden flower of respectable standing. As such it was brought to this country. Then it escaped from gardens and, the soil and climate being congenial, reverted to vagabondage and became wild flower again. Now no flower is commoner along our roadsides in midsummer. As the latest stage in its checkered career, it has stolen back again into my garden and grows among the moss roses—a little too exuberantly perhaps, yet without its decorative value there.

Such have been my humble garden adventures with floral vagabonds that came to me unsought and unexpected. In my indolent leniency I have sometimes been hospitable toward a weed, and lo! I have entertained an angel unawares.

To me the end and aim of a garden is not landscape design, not the production of rare named varieties, but simply flowers—flowers for thoughts, flowers for sentiment, flowers for remembrance, flowers for fragrance and beauty. If that be heresy, make the most of it.

W. A. D.

Ships at Anchor

Written for The Christian Science Monitor.

I love to watch them rocking to and fro—
A wish of water their faint lullaby—
Brave, patient ships, that slowly
away and lie
On the soft surface of the harbor's
calm
When, could they speak, they would
long unutterly
To face about and make their way
to sea.
And while they wait, do they perhaps
recall
The shores of Africa, the fields of
Spain?
Do they through Summer silence see
The bright still sunshine of Nor-
wegian skies?
Graceful as gulls they dip rhyth-
mically
Waiting to swing out to the open sea.
Swaying so gently in the noon-day
sun,
Their grey shapes mirrored in the
water's face
They rock, at anchor, in that peace-
ful place
Dreaming, perhaps, of beckoning
distant shores.
Of the dear moment that will set
them free
To find the rushing high-ways of the
sea.

ELKANOR G. R. YOUNG.

Imperial August

Until the Roman Senate decreed the name which the month of August has borne for nineteen centuries, it was merely the colorless Sextilis or "sixth" division of the year. When Numa reformed the calendar it became the eighth month and was named August in honor of the first of the emperors, as Quintilis, the preceding month, had been named Julius in honor of the first of the Caesars. Nor should his month continue to be shorter than July, and so it was that the already abbreviated February was robbed of another day merely to lengthen the august month of the emperor. Hence to this day August belongs to "all the rest" that "have thirty-one," and the two Caesars follow each other through the years in the perpetuation of their names in our calendar.

Our Anglo-Saxon forefathers called August Wood-month, literally the weed-month. The word is not as forbidding as it sounds, however, for the word means originally all vegetation, and, as everybody knows, the mature growth of crops at this season overrules all detriment of the weeds. For most plants the zenith of vigor is now reached, and the Dutch people call it Cost-maand, the harvest month. No matter what the weather may bring now, apparently different nations persist in taking an optimistic view of reaping bountiful rewards from the earth. One English proverb says:

If the twenty-fourth of August be
fair and clear
Then hope for a prosperous autumn
that year.

But why the twenty-fourth was selected as the test is not so clear. Other popular predictions make no qualifications at all. In his famous "Five Hundred Points of Good Husbandry," the Elizabethan Thomas Tusser declared:

Dry August and warm
Does harvest no harm,
and peoples of southern Europe are just as cheerful about rain. An Italian saying insists that "A wet August never brings dearth."

For some of the other months many old saws express doubts and warnings, and they issue all sorts of warnings if the fiftieth degree does not prove all that it should. But August apparently is superior to all meteorological caprice. It bows to no climatic adversity, but dispenses its imperial bounty with a proudly impartial power.

"Reading" in Oxford

Inseparable from lovely architecture, old gray stone and the Cherwell are the old customs, traditions and customs which have come down with them to the present day and are accepted just as we accept the gray of the stone and the flowers which grow in the crevices and on the tops of the walls.

Even those of us who come from a distance early fall into the way of using phrases as we hear them, and few question the origin of a word or the meaning of a phrase. But the Oxford student who has "come up" to do serious work usually has too much in his chosen subject to admit of a lingering list of bypaths which do not connect with the main thoroughfares of his reading; and this brings us to the expression in question.

The Oxford student "reads." He never "studies." Today, visiting that mile of books, the Bodleian Library and, just across the street, its lower story painted a sapphire blue, the old building once a dwelling, now "Blackwell's Bookshop"—the largest in the world, where the stranger and the student alike may browse at will and unmolested—one's thought runs back to the time of Alfred, England's student King, and his efforts to spread learning among his people. A few hand-printed and often beautifully illuminated manuscripts constituted the library of the England of that day, and a few men of learning, carefully sought by that great King, "read" mathematics, "read" music, logic, astronomy—to those, young and old who, not having been "advanced to the office of reading," gathered about them. For Alfred established three schools in Oxford; the Great Hall, the Lesser Hall and the Little Hall, each having its definite subjects and each its "reader." So, on down to the present day, subjects are "read" in Oxford.

Though from the point of view of accomplishment the work may be strenuous, it sounds leisurely, and entirely in keeping with the easy chair by the bright fire in his "digs," in winter months, and the punt made fast under the willow bank when the spring term begins, with books and cushions. Twilight lingers long, as spring advances to summer, and it is pleasant after an evening thus spent to drift down to Magdalen boat landing as the moon silvers the fading gold of the sky.

—JAMES HOGG, in "The Queen's Wake."

Les Cervoilles, Hébert.

Neuheit des Lebens

Übersetzung des auf dieser Seite in englischer Sprache erscheinenden christlich-wissenschaftlichen Aufsatzes

EINE Frau, die in ihrem Landhause an der Ufer eines schönen Sees viele glückliche Sommer zugebracht hatte, machte einmal einer Freundin gegenüber die Bemerkung, sie entdecke an dem Wohnsitze beständig etwas Neues. Vielleicht war es ein neuer Blick auf eine bekannte Birkengruppe, durch deren schlanke Zweige das blaue Wasser des Sees schimmerte, oder eine neue Stelle, von wo aus sie das Häuschen friedlich zwischen die Bäume gebettet sehen konnte, oder überflutete der Schein der untergehenden Sonne den Garten, so daß das Blau der Lerchen in neuem Glanz erstrahlte. So brachte ein Jahr nach dem andern Tage, die etwas Neues entfalteten, irgend einen neuen Blick der alten bekannten Bilder, woraus sie neue Blicke der Schönheit entzückte. Diese Gaben, einem bekannten Bilde neue Reize abzugewinnen, kommt in dem bekannten Liede Kees von Ausdrück, von dem ein Vers lautet:

Alte Freunde und Bilder gestalten sich lieblicher,
Ein weicher Himmel in jedem ihr sein;
Ein weicher Schimmer von Lieb und Gebet.
Wird dann dämmern über jeglicher Sorge.

Das sogenannte menschliche Gemüt mit seiner ruhigen Unersättlichkeit nach etwas Neuem glaubt, dieses durch einen Wechsel des Orts, der Personen oder der Dinge erlangen zu können. Aber das Ergebnis seines Trachtens ist nur Unzufriedenheit und Überdruß. Für ein Kind kann der Anbruch eines neuen Tages die Morgenandacht eines neuen Ereignisses sein, weil das Denken des Kindes voller Verlangen und Erwartung des Guten ist. Diese kindliche Gestaltung, die immer Gutes erwartet, weist auch auf die Bereitschaft hin, sich unterweisen zu lassen. Als die Mütter ihrer Kleinen zu Jesus brachten, damit er sie segne, sagte er zu ihnen: „Wer nun sich selbst erniedrigt wie das Kind, der ist der Größte im Himmelreich.“ Die Gelehrten jeder Zeit, die zu Jesus kamen, um ihn mit ihren Fragen und Verwirrungen zu bringen, glaubten ihre Gelehrsamkeit berechtigte, einen auszuwählten Platz im Himmelreich einzunehmen. Sie hatten das Beispiel des großen Königs Salomo vergessen, der, als ihm die Herrschaft über ein Reich verliehen wurde, demütig um Weisheit und Verstand betete und sagte: „So bin ich ein junger Knabe, weiß nicht weder meinen Ausgang noch Eingang.“

Jesus lehrte die Menschen, die alten Gesetze mit neuen Augen, kindlichen Augen, anzusehen. Durch sein leicht verständliches, trostreiches Lehren wurde aus dem alten Gesetz, das gebot: „Du sollst nicht töten“, ein neues Gesetz, das lautet: „Du sollst lieben.“ Er verlangte einen neuen Gesichtspunkt. Er sagte:

Newness of Life

Written for The Christian Science Monitor.

A WOMAN who had spent many happy summers in her little country home by the shores of a beautiful lake, once remarked to a friend that she was continually finding something new about the place. It might be a new view of a familiar clump of birches, with the blue waters of the lake shining through their slender branches; or perhaps a new corner from which she caught a glimpse of the little home nestling among the trees; or perhaps the low setting sun had bathed the garden in its light so that the blue of the larkspurs shone with a new radiance. So, year after year brought days that unfolded something new, some fresh aspect of the old, familiar scenes from which to gather new visions of beauty. This faculty of bringing to the familiar scene a freshness of vision is expressed in Keble's well-known hymn, a verse of which reads:

Old friends, old scenes, will lovelier be,
As more of heaven in each we see;
Some softening gleam of love and prayer
Shall dawn on every cross and care.

The so-called human mind in its restless craving for something new believes it may be found in change of place, or of persons and things; but the result of its search is only dissatisfaction and weariness. To a child the dawn of a new day may be the dawn of a new adventure, because the child thought is full of wonder and expectancy of good. This childlike attitude of mind that is always expecting good, indicates also a willingness to be taught. When the mothers brought their little ones to be blessed by Jesus he said to them, "Whosoever therefore shall humble himself as this little child, the same is greatest in the kingdom of heaven." The learned men of that day who came to Jesus to try to puzzle him by their questions, thought that their scholarly attainments entitled them to an exalted place in the kingdom of heaven. They had forgotten the example of the great King Solomon, who when given a kingdom to govern, humbly prayed for wisdom and understanding and said, "I am but a little child; I know not how to go out or come in."

Jesus taught men to look with new eyes, with childlike eyes, on the old laws. With his clear-sighted compas-

Hoffnung und der geistigen Liebe. Wir bedürfen dieser Augenblicke der Erkenntnis, die unsere Wiedergeburt fördern und uns jetzt am Himmelreich teilnehmen lassen, und die uns befähigen, mit dem Apostel zu sagen: „Siehe, es ist alles neu geworden!“

Roosevelt and the Children

Mr. Roosevelt's passionate love for his children is well known and I have several times referred to it. But he was strongly drawn to all children. While President, he was constantly being met by children on his many tours of the country. It was a common thing to see great crowds of children grouped at railroad stations to greet him at the towns along the route of his train. Oftentimes the fact that the President's train was going to stop at a small town five minutes would be the occasion for marching the school children down to the depot to see him.

Christmas was a great feast with the Roosevelts. Mr. Roosevelt who was really a Progressive in politics, loved old-fashioned family customs. And so long before Christmas, roaming about the estate he always selected the Christmas log. And then before Christmas he would go and chop it down himself, and he and the children would haul it in to the fire. No one was forgotten, and there was always carefully selected presents and baskets of food for some of the poor families around the village.

Indeed, the Roosevelt home, so far as its family customs and mode of living were concerned, was an old-fashioned home. The family did everything together. Of course when in the White House Mr. Roosevelt's time was taken up very much; so that he did not give his children much of it as he liked. But when at Oyster Bay he loved to gather them around at night and read to them and they loved to hear him. I have heard him say that in the old days in the West on his ranch he used to read to the cowboys at night just as he did to his children.

There were no bridge or other parties at the Roosevelt home, either in Washington or Sagamore Hill. At the White House, of course, parties were more or less formal, and there were few children's parties there, but they loved to have children's parties at their Long Island home. I think the only children's parties at the White House were at Easter and Christmas, when the family gathered in Washington for Christmas. If they were, the children of all the employees at the White House were invited and received presents. The employees also were included, each one receiving a turkey and other gifts.

I do not remember ever having seen either Mr. or Mrs. Roosevelt dancing any of the customary round dances. At the children's parties at Sagamore Hill, though, I have seen the President and his wife dance the Virginia Reel, which he always enjoyed very much.

At the White House the intimate parties for close friends were usually to hear a piano recital or some visiting singer or to meet some artist of note. Once, I remember they had the Jubilee Singers at the White House. —From "Theodore Roosevelt: Hero to His Valet," by JAMES E. AMOS.

sonate teaching, the old law that said, "Thou shalt not kill," became a new law, "Thou shalt love." He demanded a fresh viewpoint. He said, "New wine must be put into new bottles."

The new, ever present, changeless love of God cannot be kept in the old forms of scholastic theology. This love of God must be expressed in ever new manifestations to meet the ever changing human need. The infinite love of God has no boundary—it must embrace every human need.

To the one who seems to be burdened with a weary and discouraged sense of life, the need is not so much for a change of scene as for a fresh viewpoint from which to look at his problems. If our outlook seems clouded and depressed, we may be sure it is because we are looking merely at the material aspect of things, and that we need to be reminded of the spiritual facts which Christian Science teaches us to look for in considering any problem. The old thought of God as sending both good and evil to men is giving place to the more scientific sense of God as revealed by Christian Science. In Science and Health with Key to the Scriptures (p. 140) by Mary Baker Eddy, we read: "The Christian Science God is universal, eternal, divine Love, which changeth not and causeth no evil, disease, nor death."

In the realm of so-called natural science the eager student is always discovering fresh wonders, and each new discovery impels him onward to further discovery. This fresh, eager viewpoint is needed in religion more than anywhere else because the truth about God, which is the vital point in religion, concerns our very life.

The world so often seems to lose its vision because it accepts the creeds and dogmas which men have built up, instead of trying to learn the truth about God. The new understanding of God, which Christian Science reveals, means the dawn of a new life to those who are receptive to this divine idea. It is the coming of the Christ to each one of us; and as old cherished beliefs are given up, healing naturally follows. Mrs. Eddy, writing of the "New Birth" in "Miscellaneous Writings" (p. 15), says: "The new birth is not the work of a moment. It begins with moments, and goes on with years; moments of surrender to God, of childlike trust and joyful adoption of good; moments of self-abnegation, self-consecration, heaven-born hope, and spiritual love." We need these moments of vision which forward our new birth and make us partakers of the kingdom of heaven now, and which enable us to say with the apostle, "Behold, all things are become new."

TILDEN BEATS UNITED STATES AMATEUR GOLF CHAMPION OWEN JR.

Only Match Played in Newport Tennis Due to Poor Weather

NEWPORT, R. I., Aug. 24 (AP)—In a match played in spite of a drizzle and a thick fog from the sea, William T. Tilden beat Owen Owen Jr. in the third round of the invitation tournament in which he was the victor a year ago. More than 300 persons from Newport's second colony gathered at the famous casino in spite of the weather to see Owen and Tilden in action on the same stretch of turf. With cold rain falling the country ranking player set out to finish the match as soon as possible.

In the first set Owen's powerful forehand hit Tilden's ability to hold his feet on muddy ground enabled him to get one game, but in the second Tilden's service and forehand drives, bounding hard at all on the soggy turf, allowed Owen to score only occasional points.

The rain increased as the match ended, and all hope of playing the 40 other singles and doubles matches scheduled soon vanished. Forty-seven matches were set down for the day, with play to start in the morning.

George M. Lott Jr., young Chicago alternate on the Davis Cup team, arrived late yesterday and defeated in singles, saying he felt he was playing too much tennis. Jean Washer, Belgian player, who was paired with Tilden and is seeded at the opposite end of the draw, is scheduled to play his first match today.

In the draw, the 40 doubles, which was completed yesterday, Lott and John M. Doe, his running mate as Davis Cup alternate, were seeded at the top of the 40 teams and are favored to meet Tilden and Francis T. Hunter, probable Davis Cup pair, in the final.

NEWPORT INVITATION TENNIS MEN'S SINGLES—First Round

E. M. Beale, Boston, won from Julius Seiliger, New York, by default.

N. W. Niles, Boston, won from H. G. M. Kellner, New York, by default.

Dean Mather, New York, won from Frank Smith, Waterbury, Conn., by default.

E. T. Herndon, New York, won from George M. Lott Jr., Chicago, by default.

W. T. Tilden, Phila., won from George Owen Jr., Boston, 1-6, 6-0.

JOHNSTON READY TO INVADE THE EAST

To Play in U. S. Doubles First, Then Davis Cup

SAN FRANCISCO, Calif., Aug. 24 (AP)—William Johnston dismissed business thoughts yesterday and prepared to depart for the East in quest of further tennis honors.

This morning he left for Boston to pair up with H. L. Williams in the United States doubles beginning next Monday. The little San Francisco tennis player is considered a favorite in the United States Lawn Tennis Association and those who follow the game believe this pair will form America's team in the Davis Cup pairings.

Following the national doubles play, Johnston will carry his smashing game into the Davis Cup challenge round, Sept. 8, 9 and 10, at the Germantown Cricket Club, Philadelphia.

Lastly he will appear in the national singles championship, which he has held twice.

Reports from the East indicate that the burden of the Davis Cup play is going to fall upon the shoulders of Johnston. This conclusion is reached because his terrific offensive style of play has always been virtually unsolvable to the French racketeers.

That the French pair will defeat Johnston to reach the challenge round is expected on all sides.

Observers say that Johnston either wins or loses by his own efforts. While most matches are won on opponents' errors, he smashes the ball continuously to pile up points, and in this blinding speed he has always baffled France's tennis delegations.

Penn State Board Makes Two Rulings

By the Associated Press

State College, Pa., Aug. 24

TOTAL abolition of athletic scholarships after Oct. 1, next, and immediate abandonment of all forms of football and other scouting has been finally decided upon by the newly organized board of control of athletics of the Pennsylvania State College.

Commonwealth of Australia

Due September 1, 1957

NOT REDEEMABLE PRIOR TO SEPTEMBER 1, 1947

Redeemable, at the option of the Commonwealth, as a whole or in part, upon 60 days' notice, on any interest payment date, as follows: on or after September 1, 1947, and prior to September 1, 1952, at 102% and accrued interest; on or after September 1, 1952, at 100% and accrued interest.

Coupon Bonds in denomination of \$1,000

Principal and interest payable in New York City, either at the office of J. P. Morgan & Co., or at The National City Bank of New York, in gold coin of the United States of America of the present standard of weight and fineness, without deduction for any Australian taxes, present or future.

The following statement has been made on behalf of the Commonwealth of Australia by its Commissioner in the United States of America, Sir Hugh R. Denison, K.B.E.:

GENERAL. The Commonwealth of Australia is an integral part of the British Empire and comparable in importance with the Dominion of Canada. Loans of the Commonwealth issued in London enjoy the highest credit and constitute a legal investment for Trustees in Great Britain.

PURPOSE OF This loan is issued by the Commonwealth of Australia as a central borrower on behalf of itself
ISSUE and the States of Australia. The proceeds of the Loan will be used for developmental and productive public works and for the payment of maturing debt.

SINKING FUND The Commonwealth has established a Sinking Fund for its public debt under the National Debt Sinking Fund Acts, which provide, that, during a fifty-year period beginning in 1923, payments from revenue to the Sinking Fund must be made at the rate of not less than $\frac{1}{2}\%$ per annum of the amount of

the Commonwealth loans outstanding in 1923 and loans subsequently issued, except those raised for the purpose of making local advances which are to be repaid to the Commonwealth and credited to the Sinking Fund. All German reparations received by the Commonwealth and one-half of the net profits of The Commonwealth Bank of Australia must also be paid into the Sinking Fund. Bonds acquired for the Sinking Fund must be cancelled and sums paid to interest at 5% per annum on such sums must be paid into the Sinking Fund. Repayments of Commonwealth loans to interest at 5% per annum on such sums must be paid into the Sinking Fund (except as to bonds repurchased by the Commonwealth) and any revenue advanced out of German reparations and out of surplus revenue paid into the Sinking Fund). The Sinking Fund is under the administration of a National Debt Commission, which applies the Sinking Fund money to the retirement of Commonwealth debt by the repurchase of loans in the open markets, by the redemption of loans prior to maturity, or by the payment thereof at maturity.

In addition to the mandatory payments into the Sinking Fund, the Treasurer of the Commonwealth has authority to apply surplus revenues to redemption of debt, and in the four years ended June 30, 1927, \$36,088,772 of surplus revenue has been so applied. The total amount applied from all sources to debt redemption in the same period of four years was \$126,808,454, equivalent to an average annual rate of redemption of about 1½%.

GOVERNMENT DEBT *The total gross debt of the Commonwealth as of June 30, 1927, amounted to \$2,243,786,167, consisting of \$402,196,472 external debt in the hands of the public; \$416,440,265 debt to the British Government (to be amortized by 1956 under a funding agreement of 1921); and \$1,425,149,430*

At a recent conference of Premiers, an Agreement was entered into for adjusting the financial relationships between the Commonwealth and the States of Australia. This Agreement will operate for two years, before the end of which period the people will be asked by referendum to embody the terms of the Agreement permanently in

the Federal Constitution. The Agreement contemplates that the Commonwealth shall take over the debts of the States, the Commonwealth to apply for a period of fifty-eight years from July 1, 1927, towards the interest on those debts, a sum equal to the total of the per capita payments made by the Commonwealth to the States in the year ended June 30, 1927, and the States to provide the balance of the interest. There is a further provision that the Common-

wealth and the States, out of their respective revenues, shall make annual contributions to a Sinking Fund, designed to extinguish the present debts of the States in a period of between fifty and sixty years from the present time and all future loans within a similar period from the time of their issuance. All future borrowing for the purposes of the Commonwealth and the States is to be arranged by the Commonwealth, in accordance with decisions of the

Loan Council which is representative of the Commonwealth and of the States. In respect of such borrowing, Commonwealth securities are to be issued, except where the Loan Council unanimously decides that the securities of a State may be issued, in which case the State securities so issued are to be guaranteed by the Commonwealth.

REVENUES AND EXPENDITURES The ordinary revenues of the Commonwealth in the fiscal year ended June 30, 1927, amounted to \$380,405,716, and its ordinary expenditures to \$367,392,466, resulting in a surplus of \$13,013,250. The expenditures include \$16,110,188 applied from revenue to the redemption of debt.

MONETARY SYSTEM The monetary unit of Australia is the pound sterling, the gold standard having been restored on April 28, 1925, coincidently with similar action in Great Britain. The Commonwealth Bank of Australia has the sole power of note-issue and holds a gold reserve of over 45% against its outstanding notes.

*All figures stated in dollars in the above statement have been converted from pounds sterling at par
hange.*

THE ABOVE BONDS ARE OFFERED FOR SUBSCRIPTION, SUBJECT TO ISSUE AND DELIVERY TO US AS PLANNED, AT 98% AND ACCRUED INTEREST, TO YIELD OVER 5½% TO MATURITY.

Subscription books will be opened at the office of J. P. Morgan & Co. at 10 o'clock A. M., Wednesday, August 22, 1907, and will be closed in their discretion. The right is reserved to reject any and all applications, and also

case, to award a smaller amount than applied for. The amounts due on allotments will be payable at the office of P. Morgan & Co., in New York funds, the date of payment (on or about September 7, 1927) to be stated in the certificate of allotment. Temporary Bonds or Interim Receipts will be delivered, pending the preparation and delivery of the final bonds.

RADIO

TORONTO SWIM REPORTS TO BE TRANSMITTED

Thirty Nationalities Are Entered in National 21-Mile Marathon

When the 400 contestants in the \$50,000 swimming marathon at Toronto jump into the water at 8:30 a. m. Wednesday, Aug. 31, a radio-equipped steamer will follow them and report their progress at short intervals throughout the day and night. The biggest swim in the history of aquatic sports will be adequately covered from a radio standpoint.

Under the auspices of the Canadian National Exhibition and William Wrigley Jr., swimmers from every State in the United States, from every section of the Dominion of Canada, from France, Germany, South Africa, New Zealand, England and a number of other countries, representing more than 30 nationalities, will strive to battle the cold waters of Lake Ontario over a triangular seven-mile course three times.

On board the Canada Steamship Liner Macassa there will be a 100-watt transmitter operating on a wavelength of 130 meters. In front of the microphone will be Foster Hewitt, well-known Canadian sports announcer of CFCB, who has been named as official announcer by the Canadian National Exhibition.

Hewitt is one of the premier sports announcers in Canada, and in this role his voice has told thousands of sport fans in Canada and the United States the outcome of the most eventful baseball, rugby and hockey games in the Dominion.

Owing to the long hours of the race, which will in all probability not finish till near midnight of Aug. 31, or perhaps during the early hours of Sept. 1, the National Broadcasting Company will not come on with its chain of stations on the swim report till near the end. At least two Toronto stations, each with a continent-wide range will broadcast reports all day and night. CFCB on 251 meters and CFRB on 291 meters will be on the air from Toronto for the whole period. WGR at Buffalo will in all probability be on the air with reports of the swim all day, later on coming into the big hookup.

Short-wave reports from the steamship Macassa will be picked up on a powerful receiver in the Press Building in the Canadian National Exhibition grounds. The reports of output amplifiers will feed the reports to the Toronto stations, the American hookup, and speech amplifiers installed on the grounds. Every arrangement is being made to assure perfect reception of the swim reports for the thousands who will line the waterfront in an endeavor to catch glimpses of the swimmers as they pass nearby in their three laps, each a mile length, in front of the exhibition grounds.

Announcing the positions of the various swimmers will be no easy task. After the first two or three hours in the water this regiment of athletes will be well beyond the length and breadth of the seven-mile course.

To further the difficulty, each of the 400 swimmers will have accompanying him or her a host of assistants, trainers, boatmen and official observers. There will be pleasure craft and police boats and airplanes and seaplanes overhead, as well as press boats and a fleet of others. To fill in the periods between announcements an orchestra will accompany the radio boat, supplying music for the spectators as well as for the participants.

Some of the well-known swimmers who will compete are George Young of Toronto, who won the Catalina swim; George Michel of France, an English Channel swimmer; Lee Byrion of Long Beach, Calif.; Byron Summers of San Francisco; Ethel Herlie of New York; Lettie Schoenell of New York; Ernest Vierkotter of Germany; Olaf Farstad of Norway; Mme. Sion of Brussels, Belg.; and Miss Dorothy Hepburn of England, as well as "Red" Keating of New York, Lake George winner.

Registered at the Christian Science Publishing House

Among the visitors from various parts of the world who registered at the Christian Science Publishing House yesterday were the following:

Edna W. Hurl, Buffalo, N. Y.; Mrs. Irene Hurl, Buffalo, N. Y.; Mrs. James Stewart, New York, N. Y.; Mrs. Mary B. Hudson, Houston, Tex.; Mrs. Edith Smith, New York, N. Y.; Mrs. Harriet Katz, Brooklyn, N. Y.; Mrs. Mary M. E. Kelly, New York, N. Y.; Mrs. Mary F. Johnson, Glenside, Pa.; Mrs. Blanche DeWitt, Philadelphia, Pa.; Mrs. Katherine Dierman, Cedar Rapids, Ia.; Mrs. Anna A. Dieman, Cedar Rapids, Ia.; Mrs. Louise Herzenhahn, Berlin, Ger.; Mrs. Mabel E. Lint, New York, N. Y.; Mrs. Campbell, New York, N. Y.; Mrs. Josephine D. Neibel, New York, N. Y.; Miss Beverly Rose, Belmont, Mass.; Miss Elizabeth Gwynne, New York, N. Y.; Mrs. Kate Gibbs, Bradley Beach, N. J.; Helen E. Struve, New York, N. Y.; Mrs. Marion T. Clark, Asbury Park, N. J.; Mrs. G. Gibbs, Bradley Beach, N. J.; Ethel May Johnson, Glenside, Pa.

HAWAII BUILDING ROADS

HILO, Hawaii (Special Correspondence)—More than \$1,000,000 has been spent on road improvements on the Island of Hawaii in the past two years, it is learned at the office of the county engineer. Some \$750,000 from the 1925 two-year territorial loan fund was spent on main highways and about \$250,000 on connecting and homestead highways.

THE OFFICIAL

Browning-Drake Kit

May be secured from almost any good radio dealer. Constructional booklets on the new Browning-Drake may be secured through dealers or direct for \$2c.

First Air-Commercial "Truck"

Wide World Photos

Special from Monitor Bureau

"AIR TRUCK" for Delivering

A "AIR TRUCK" for delivering typewriters which has just been purchased by the Royal Typewriter Company, is shown in the above photograph. The "truck" is a Ford-Stout, all-metal, three-motor airplane with racks for 200 portable typewriters in the fuselage and also a small desk at which a shipping clerk will do his billing, routing and correspondence.

"I am absolutely convinced of the future of this phase of commercial aviation," states George E. Smith, president of the company, "and I believe the phrase 'by air truck' will soon be as familiar and as significant as 'by air mail' is now."

"We have inaugurated this air delivery service only after assuring ourselves that it would be a profitable investment. The rapid delivery of merchandise by air delivery trucks makes possible the immediate filling of emergency orders and the relative cheapness of this form of transportation."

tion, when the speed factor is considered, convinced us that the institution of this service would be a dividend paying proposition. This service, at any rate, is our contribution to the practical use of airplanes in the service of commerce."

The airplane is now at Curtis Field but will leave soon for the company's factory in Hartford, Conn., where 210 typewriters will be taken on board for delivery. At some delivery points the typewriters will be dropped by parachute. A hatch has been cut in the rear of the fuselage through which three typewriters will be dropped at a time. Tests of this method of delivery were made in Detroit. The typewriters landed so easily they could be used at once, Mr. Smith said.

It is expected that the first flight will be made to Cuba or to the Pacific coast. John A. Collins, former army flyer and the two-time pilot of the Ford-Dearborn-Chicago freight line, will pilot the Ford-Stout airplane.

While no final conclusion has been reached it is expected that most of the sessions of the conference will be open to the public, but some of them will be in executive session in accordance with the desires of some foreign delegates who are not used to the plan of the open conferences.

Known to KFI receptionists, for these artists can all be relied upon for some worthwhile entertainment.

Frank Kampman and Gollin O'More are also scheduled for two selections, "Bells of Hawaii" and "Havana," while Vaughan De Leath will contribute a pair of solos, "Then You'll Remember Me" and "Dew, Dew, Dewey Day." Erva Giles' solo selection will be "Serenade by Patricello."

Harry Reser's Cliequot Club Eskimos now boast of five groups for their weekly broadcast through the Red Network. His tribe, grown to 20, double the size it was last year, includes a string combination, a saxophone combination, Marimba unit, Spanish and Hawaiian ensembles which are available to interpret any type of program that Chief Eskimo Reser might select. The 20-piece orchestra will be heard beginning at 9 o'clock, eastern daylight time, on Thursday evening, Aug. 25.

Three of KFI's devotees of modern classical music will be on the air Tuesday night from 10 to 11. The talents of Nellie Callender Mills, violinist; Lillian Ariele, pianist, and James Burroughs, tenor, are well

known to KFI receptionists, for these artists can all be relied upon for some worthwhile entertainment.

Frank Kampman and Gollin O'More are also scheduled for two selections, "Bells of Hawaii" and "Havana," while Vaughan De Leath will contribute a pair of solos, "Then You'll Remember Me" and "Dew, Dew, Dewey Day." Erva Giles' solo selection will be "Serenade by Patricello."

Some Popular Misconceptions

EVIDENCE that American constitutional arrangements might be better understood in Europe has again been given by foreign comments on the Sacco-Vanzetti case. European groups are inclined to direct their protests to the national Government, and to think that it is within the power of President Coolidge to intervene. To a slight degree it is true that foreign misapprehension has been encouraged by references to the federal Department of Justice and the bearing of its files on the prosecution. The chief difficulty, however, is that the single system of criminal courts which prevails in most European countries makes it possible for pardons for all offenses to be issued in the name of the national executive, whether he be king or president. A division of powers between central and state governments, each supreme and uninterfered with in its own sphere, is foreign to European experience. When, therefore, this feature of the American Constitution is brought into question, there is much misunderstanding.

Similar confusion has arisen before. During the first Wilson Administration the California Legislature proposed to pass a law forbidding the ownership of land by aliens. Japan protested to the American Government and Secretary of State Bryan journeyed to Sacramento. Among Europeans, however, there was almost total ignorance of the fact that all Secretary Bryan could do was to use his influence. He could attempt to persuade California to enact a less drastic law. Any conflict between the proposed statute and the treaty with Japan would have to be submitted to the courts which would finally decide. The federal executive was powerless. Foreign statesmen understood this, but foreign peoples and even journalists were unable to comprehend the inability of the American State Department and President to intervene when a serious international complication was threatened.

At the Paris Peace Conference in 1919, there was an inadequate realization by European statesmen of the position of the United States Senate as the final arbiter in America's foreign relations. The share of the Senate in the treaty-making authority was known, but Europe was inclined to believe that in dealing with the Senate, President Wilson would be in much the same position as Mr. Lloyd George in presenting the treaty to the House of Commons, or M. Clemenceau in securing the approval of the Chamber of Deputies. It was never fully understood that the individualism of senators, the influences of sections, and the power of national and local party organizations, not to speak of the fact that President Wilson could be defeated without a change of executive or a dissolution of the legislature, actually invited the Senate to insist on having its own way.

Even well-informed European newspapers and journalists sometimes show inadequate knowledge of the intricacies of American politics. Sometimes the "bulls" are merely laughable. A few years ago, for example, the London Times published the portrait of a congresswoman, gavel in hand, who had been "chosen to preside over the House of Representatives." What had happened, of course, was that the Speaker had paid a delicate but minor compliment to the congresswoman by asking her to hold the gavel for a few uneventful moments and the photographers had seen an opportunity to add to the pictorial sections. American writers frequently make similar mistakes of interpretation or nomenclature. Even the publishers of the Page Letters referred to the Ambassador's friend, Sir Edward (later Lord) Grey, as "Earl Grey." The faults are by no means on one side, and the opportunities for error are vastly increased as differing political institutions increase in number and in complications.

The Government's Business

GOVERNMENTAL ownership of industry in but rare instances has proved successful or largely beneficial in the experience of the United States. It has therefore come to be recognized as conclusive that the Government should restrict its operations to the field of government and leave industry and commerce the freedom of action which individuals have a right to expect. This same thing is once more finding expression in the affairs of the Philippine Islands, where, during the so-called economic emergency existing after 1917, the Government was constrained to invest in a number of industrial and commercial enterprises. As a result of that policy, the Philippines have been confronted with a serious problem ever since 1921.

Only a few of the companies in which the Philippine Government invested have ever shown a profit. Notable among the latter are the Manila Railroad Company, the Philippine National Bank, the Cebu Portland Cement Company and the Manila Hotel Company. The last named, several years back, actually paid a dividend on the Government's stock, but that was the sole case of profit realized on these investments. The bank has redeemed a portion of its circulating notes and set aside a reserve fund; the railroad has reimbursed the Government in part for the amounts advanced under its guarantee of bonds and has redeemed some of its outstanding bonds. Through the Philippine National Bank the Government has large sums invested in the sugar industry. The National Coal Company has gone bankrupt and ceased operations.

While the losses sustained by the Government are not likely to be substantial, the record of achievement is decidedly unimpressive. How far that results from the inability of the Government to set up proper machinery for administering the investments made is not entirely clear, although recent reports from Manila recount the dissents between the Governor-General and the Philippine Legislature on that point. The Board of Control, which was first established to administer these investments, was declared illegal, and when the Governor-General sought to vote the government stock the leaders in the Legislature began to object. It is manifest that the experiment in government

ownership has not been happy, and the recommendations of the Governor-General that the Government "get out of business at the earliest possible date consistent with the protection of the Government's interests" is one that deserves hearty support.

A Truce to "Stunt Flying"

THE lamentable disasters which seem to have attended the latest air race justify emphatically a word of protest and of caution. It is, of course, possible that some or all of the three missing machines, carrying seven persons, attempting a flight from the California coast to Hawaii, may yet be found, but every day's delay makes the possibility of rescue of the imperiled adventurers slimmer. Not only the possible loss of human life, and the suffering entailed upon those associated by close ties with the missing aviators is to be considered, but there is the further fact that the progress and the popularization of aviation, which were given so great an impetus by Lindbergh's successful flight, will sustain a corresponding check from disasters such as these.

It is impossible not to believe that there was about this contest a certain undue eagerness and haste of preparation, and a lack of the careful precaution which should attend any serious attempt to make a prolonged journey over the trackless ocean. The considerable prize offered, the number of contestants, each one striving to anticipate the others, the lack of dependence upon careful weather prognostications, and the general tendency to put haste before everything, may have resulted in a failure properly to study the airplanes and the conditions which they had to meet. Three out of eleven failed to get through. Such a proportion of casualties, if at all general, would be almost fatal to the public acceptance of aviation as a method of travel.

Since Lindbergh's successful and epoch-making exploit, there has been, probably inevitably, a period of somewhat feverish competition in all forms of flying adventure. Is it not time to call a halt? Would it not be well for the press to moderate somewhat the zest with which it gives unlimited publicity to every "hop-off" and every flight? The interest in the development of aviation is highly commendable, but it should take the form of encouraging improvements in construction, the multiplication of safety devices, the establishment of airports, and development of the industry along sane and practicable industrial lines. The unlimited encouragement of "stunt flying," simply because it presents peculiar dangers and appeals to the sporting instinct, is something which should be checked.

Naval Economies

SINCE the adjournment of the conference at Geneva which designed to effect an international agreement for the further limitation of naval armaments, an unusual amount of propaganda has been circulated regarding the necessity of increasing the naval construction program in the United States. Statements to this effect have been issued by persons in high positions politically, and even recognition has been given to them by President Coolidge, who in a recent interview stated that tax reduction in the next session would depend largely upon the appropriations authorized by Congress. The tentative budget of the Government already shows an increase over previous estimates, which are attributed almost entirely to naval requirements which are now being put forward.

The facts of the case are obvious, however. The program for naval construction has been predicated upon a long-term vision. President Coolidge pointed out that the plans had called for a definite number of ships, only a few of which were authorized by the last Congress. Had the nominal program been sanctioned, and had the normal appropriation bills been put through by the last Congress, many of the increased items now advanced in the budget would not have been necessary.

It is not necessary to increase appropriations for the rapid construction of an increased navy just because Japan and England failed to sign an agreement with the United States at Geneva. That conference was not the end of the negotiations by any means. Each nation not knowing more fully what the others have need of in the way of naval protection, there is far more likelihood of an accord being reached at some date in the future. No occasion has been offered for a scramble to build rival navies. To do that would be to weaken the economic powers of the nations and render them impotent through tax burdens, a policy which is manifestly inopportune and one not lightly to be adopted by wise statesmen.

Populating the Northwest

ALTHOUGH containing many times the area of the six New England states, plus New York or Pennsylvania, the seven northwestern states, from the Great Lakes to the Pacific, contain only approximately the equivalent of New England's congested population. The problem of the Northwest is that of encouraging settlers to take up portions of the available and productive land, millions of acres of which await the turning of a plow and the planting of seed.

Yet the Northwest is in no haste to bring people to its region merely to swell the total inhabitants of the seven states. What it seeks to do—and the problem is being studied jointly by the railroads and the states—is to "hand pick" the prospective settlers. It wants farmers, but only farmers of a type who understand farming. A poor farmer is worse than none at all, the Northwest appears to believe, and hence the attempt to build up the Northwest is proceeding along conservative and logical lines.

Land booms and inflation have had their effect upon prospective settlers, and until confidence can be restored it is apprehended that farmers will be slow to leave their present homes and take up their residence in a section which has the reputation of being "broke." But the Northwest is no longer in that state of adversity.

Good crops this year and the general improvement which has resulted have gone far to dispel the conviction that the West is a poor place to

settle in. Much remains to be done in the financial rehabilitation of this section, which has experienced a prolonged depression economically, but the process has received an impetus during the first part of the present year.

Picturesque as the "cowboy" of the plains was, his loss can be compensated for by the sight of well-loaded freight cars carrying the products of a fertile and prosperous country to their eastern markets and bringing back the supplies and materials, automobiles and farm implements, to the people of this broad area. Such a sight would gladden the hearts of many business men, bankers and railroad managers of the Northwest, and it is to bring such a condition to pass that a definite campaign is under way to encourage settlers of a type who will add to the growing prosperity of this region. A land of opportunities, the Northwest needs only to "sell" itself to the rest of the Nation in order to participate in the wealth of other and more thickly populated regions.

Learning in the Philippines

ONE of the outstanding features of the annual report of the Governor-General of the Philippines was the statement relating to the growth of the University of the Philippines. It was readily obvious from this that the spread of education and of the desire for learning on the part of the natives has been notable. The results are now gradually showing themselves in the general improvement of conditions and the happiness of the peoples, to which special attention was called by the Governor-General.

The University of the Philippines is maintained by a direct annual appropriation by the Legislature, therefore it requires but small tuition and incidental fees from its students. There were 4304 students of collegiate standing enrolled during the past year, as against 3969 the preceding year. In the Conservatory of Music, the School of Fine Arts, the School of Forestry, the School of Nursing and the Demonstration School of the College of Education, it was pointed out, there were enrolled 1676 students of subcollegiate grade.

Coincident with this rapid growth of the university, however, there have been noted some of the errors resulting from overexpansion. It is reported there has been an undue elaboration and multiplication of courses with consequent overlapping and lack of proper co-ordination. Serious attention is now being directed to remove these. That is no small task in itself, as there has been engendered a demand for education along various lines, and the Government is not infrequently put to it to find some way of meeting that demand without a duplication of effort. A typical example of this was noted in connection with the Junior College at Cebu, which was to be abandoned. The people of Cebu provided a site and 100,000 pesos for a building and an annual contribution of 30,000 pesos for operation of the branch. Confronted with such a desire, the demand for a branch had to be met. That well represents the attitude of the people of the Philippines toward its leading institution of learning. The Government could not well afford to overlook such an appeal.

The Potent Atom

"THINGS are going to move in such a way that if once the atom is split, for instance, and that is bound to happen in a certain number of years and may be in the newspapers tomorrow morning—there will be no need for coal, gas, electric light, steam or anything like that. You will be able to run a train from London to Edinburgh for a halfpenny, and to light the whole of London for a penny. Nobody will have to do anything approaching the amount of work they have to do now, and everybody will be provided with ample leisure."

This cheerful forecast was made by Prof. Percy Buck at a gathering of teachers attending the City of London Vacation Course on Education in England. It envisages a time when the mechanical discoveries of the past fifty years—automobiles, wireless, and aviation—may be as nothing compared with what may eventually become available to relieve the burden of human labor. Professor Buck is an optimist, but he bases his calculations upon already partially ascertained facts. The release of the power which the atom is said to contain may or may not prove eventually feasible but school children in Britain are already being taught that such power is there.

Random Ramblings

The Federal Bureau of Efficiency has recommended that fewer government reports be printed, but doubtless this devastating proposal will be effectively opposed by the League of Associated and Amalgamated Manufacturers of Waste Paper Baskets.

Those 11 Y. M. C. A. boys touring eastern United States in a five-passenger automobile give added proof to the claim that the capacity of a driver is limited only by the number of members in the owner's family.

It has been said that the man who starts out to borrow trouble finds out that his credit is good. But it might be added that it would be more to his credit if he stopped borrowing, and lent a little friendly aid.

There are the days when the amateur gardener compares his product with the pictures in the seed catalogues and decides the artist should try gardening.

When transatlantic flights are made from London to San Francisco those oft-mentioned "middle Atlantic states" should become convenient halfway stations.

When aviation reaches further development the automobile business may find itself in about the same position as the carriage business is today.

Speeding on the road to success is permissible, just so long as one doesn't become a road hog, or try to cut in on the other fellow.

A happy solution to the question of whether the plural is gladioluses or gladioli is to call them "glads."

Already many a college graduate of this year has decided that learning is the smaller part of wisdom.

The dictator who rules without a country is—fashion.

One Day in Palestine

By ALBERT F. GILMORE

IN NO other country in all the world can one with a single glance encompass so many witnesses of the progress of the human race as in Palestine. Our last day in the Holy Land perfectly exemplified the possibilities in this direction.

April 28 dawned clear and crisp. Two days before a half-inch of rain had fallen, one of the "latter" rains which bring joy to the heart of shepherd and farmer alike, for they both insure good pasture for the flocks far into the hot months, and make certain a bountiful harvest of grain.

The country is fresh and smiling as we leave Jerusalem by the Damascus road which leads northward over the hills of Judea. We touch the old Roman road here and there for a few miles until it forks, one branch leading to Jaffa, the other to ancient Caesarea.

Along the way the Arab farmers are busy with the late sowing of millet and sesame, the summer crops, while the women are engaged with cleaning the wheat, now well grown, of weeds and tares. The grape vines are putting on their summer foliage, and the olive and fig trees are now in full dress of soft green, with promise of an abundant yield. Wild flowers are still in lavish abundance; rock roses and gay hollyhocks, brilliant red poppies and yellow broom, pheasant's eye and cyclamen lend a happy variety of color to the fields and roadside.

About many of the numerous hilltops we pass cluster some appealing incidents of sacred history. We are scarcely over the height of Scopus and well out upon the ridge beyond when we come upon the village of Shafat, ancient Nob, "a priestly city of Benjamin" where, for a time, in Saul's day, the Tabernacle was placed. From this eminence the traveler from the north catches the first sight of the Holy City. Hither David fled from the jealous Saul and, received by Abimelech, in desperate need, ate the shew-bread before continuing his flight to Achish at Gath.

To the west rises the high peak of Nebi Samwil, where Samuel judged Israel and where tradition says the prophet is buried. It is one of the places sometimes called Mizpeh, but there is room for doubt as to the authenticity of this claim. The claimants to the ancient honor of Mizpeh are not less in number than the cities claiming to be the birthplace of immortal Homer. Nebi Samwil was the scene of very severe military operations during the Great War, for here the Turks made a last desperate stand to defend the Holy City, only five miles to the east.

The little village which crowned the hilltop was laid in ruins by the persistent shell-fire of both sides and when finally the British prevailed, the fall of Jerusalem was inevitable. The village is now rebuilt and a tall minaret crowns the mosque erected above the traditional burial place of the Prophet. Nebi Samwil, rising nearly 3000 feet above sea level, affords a surpassing view of Judea. From its crest with a turn of the head, one's vision sweeps from the Mediterranean across Jordan to Moab and Gilead.

Another hilltop is pointed out as the Gibeah of Benjamin, where the abuse of "a certain Levite" led to serious consequences. Ten miles out we pass the village of El-Ram on the frontier between Judea and Israel, identified with the Ramoth of Benjamin. It is believed that in this place the Hebrews were gathered by their captors before being taken to Babylon.

On many of the hillside stand round, stone watch-towers, useful for the farmers guarding their vineyards when the grapes are ripe. Some of them are very old, dating back to the early centuries of the Christian era. As the road bends around the hilltops we pass the little village of El-Bireh, thought to be ancient Beeroth. A crusader church crowned the near-by hill because tradition holds that it was here that the youthful Jesus was missed by his parents on the occasion when after anxious search he was found in the synagogue with the elders.

The tradition seems to be based upon the fact that Beeroth was the first stopping place for caravans and bands of travelers coming out of Jerusalem. While it was scarcely a day's journey distant from the city, a late start made it a practical halting place for the first night out on the journey to Nazareth, Tiberias, and Damascus.

We soon leave the high places of Judea and descend through olive groves into the valley known as the Wadi el Harram, "the valley of the robbers." Here at the foot of a steep hill, are many caverns which sheltered evil-doers, giving the place its name "Fountain of the Robbers." Our companion who is also a very efficient guide and wise counsel, and who has been for many years a resident of this country, tells us that before the coming of the motor-car and the railroad there were no roads, only trails for horse, donkey and camel, and that travel was dangerous because of robbers. The present day traveler in Palestine rejoices in a great sense of freedom and security quite lacking under Turkish rule.

The hills of Judea now give way to the mountains of Samaria, for Gerizim, and Ebal lie across our path. These mountains, the intervening valley, and the plain to the east were the scene of many important incidents in the early history of the children of Israel. The Samaritans hold that it was on Mt. Gerizim that Abraham prepared to sacrifice Isaac. Here Jacob built an altar and in due time dug a well. Into this valley Joshua led the children of Israel and the towering heights became to them the "mountains of blessing and of cursing."

So near are they that from a natural amphitheater on the lower base of each the human voice may be distinctly heard on the other. It was up the steep trail on Gerizim two weeks earlier that we climbed to witness the rites of the Samaritan passover, which is still kept in strict accordance with Levitical law, even to the slaughtering of the lambs before the altar.

At the foot of Mt. Gerizim to the east is located Jacob's well, where Jesus held his memorable conversation with a Samaritan woman from the village of Sychar, modern Askar, in plain sight, nestled against the foot of Ebal. How appealing the setting; Jesus on his way from Jerusalem, contrary to his custom because of their unfriendliness, was passing through the country of the Samaritans. Worn by the journey, he sat by the well, the place of refreshment, and a Samaritan woman from the village came for her pitcher of water. The words he uttered convey one of the most important lessons ever delivered to mankind. Neither on this mountain nor at Jerusalem shall be the true worship; "God is a Spirit; and they that worship him must worship him in spirit and in truth."

The visitor is quite likely to be disappointed by the present surroundings of Jacob's well. He probably has pictured an open situation, and a true well where he may sit and ponder the significance of the message delivered there. This, however, will not be his privilege. A Russian church partly constructed occupies the site, while a completed chapel covers the well. We entered amidst the smoke of incense and the chanting of the litany, both of which seemed strangely out of place. A boy lowered a group of lighted candles to show us the great depth of the well, some seventy-five feet, and drew for us a bucket of water, but we hasten out, as the open air seems more in harmony with our thoughts.

Between Bir Yakoub, Jacob's well, and Sychar, stands Joseph's tomb in the "paradise of ground" which Jacob bought of the sons of Hamor, the father of Shechem, "for an hundred pieces of money" and it became the inheritance of the children of Joseph. It would be difficult to name another object so widely venerated as is Joseph's tomb. Jew, Samaritan, Christian, and Moslem all alike recognize the great qualities of Joseph and recognizing them wish to do homage to his memory.

Abraham, entering the land of the Canaanites, pitched his tent under the terebinth of Shechem. Later, when Jacob came, it was a city of the Hivites, and Shechem was

the headman from whom Jacob purchased the parcel of ground. Abimelech induced the Shechemites to revolt from the Hebrew commonwealth and elect him as their king. After three years of unjust rule they expelled him from the city. Then Abimelech raised an army and attacking Shechem, destroyed it and sowed the ground with salt to make it sterile. That the land and city were restored, however, is evident from the return of the Israelites under Rehoboam, Solomon's successor.

After the Samaritans sprang up, the history of Shechem becomes inextricably involved with this strange people. The keeper of the excavations showed us about the old ruins, the city gates and walls, the walls of the temple, the remains of the houses and heaps of potsherds, some of which it is believed antedate the coming of Abraham. Then he gave us wheat found in a grain bin near a rock mill, under many feet of rubbish which has accumulated during the intervening centuries. It is believed, and it seems with reason, that this grain dates back to the destruction of the city by Abimelech some 3000 years. It is as well preserved as though harvested yesterday.

Passing through the well-watered valley between the mountains, we leave Nabulus on the left, and proceed about seven miles to the site of Omri's capital, the ancient city of Samaria, the chief object of our journey. This oblong hill stands high above the surrounding plain, a prosperous and fertile valley, an ideal site for a city, both as regards defense and the commanding view it affords of the surrounding country. Omri, king of Israel, "bought the hill Samaria of Shemer for two talents of silver, and built on the hill, and called the name of the city which he built, after the name of Shemer, owner of the hill, Samaria." So runs the narrative in the book of Kings. This occurred about the year 925 B. C. Samaria became the capital of the ten tribes of Israel and gave its name to the surrounding country.

Omri, like Solomon, built substantially, setting the foundation stones of his temple into the very rock. Ahaz, to please Jezebel, his wife, daughter of the king of Tyre, followed with a temple to Baal. Then came the Assyrians under Shalmaneser IV, who after a long siege took the city and built upon the ruins. The next conqueror of this hill-city was Alexander the Great. In 331 B. C. after a siege that nearly destroyed it, he replaced the inhabitants with Syro-Macedonians, who occupied it until it was taken by John Hyrcanus.

During all these centuries Samaria was a small city, scarcely more than crowning the hill. But Herod the Great rebuilt it, extending its area and magnificence. Standing on the escarpment near the western gate of the city one views at a glance the work of the early successive conquerors; the rock-set walls upon which Omri's temple rested; the foundations of Ahab's pagan temple; above these the vertical stones set by Shalmaneser II, and resting upon these the works of Alexander, firm and in place notwithstanding the seven sieges to which the city was afterward subjected.

Above all and extending over every hand are the works of Herod the Great, remains of a colonnade extending quite around the hill, ruins of a theater, a basilica, and the many buildings which made up a magnificent Roman city.

What a panorama of human history is here laid bare! What endeavor to establish the ideals of the various conquerors are here exemplified. The history of 1500 years is depicted in these stones and columns amid the ruins of which the mutilated statue of Augustus Caesar, "Sebastos," lies prostrate, an eloquent witness to the temporality of the works of men. The modern Arab village clinging to the eastern slope of the hill bears the name of Sebastieh, a corruption of Sebastos, named in honor of Caesar.

Leaving this historic site, after lunch under an ancient olive tree, we retrace our road for a few miles, then strike down a valley toward the sea, passing on to the plains of Sharon, where the green fields speak of peace and plenty. After an hour and a half we enter the orange groves which for many miles in all directions surround Jaffa by the sea.

The country here is very prosperous, but Tel-Aviv, the suburb of Jaffa, a settlement of some 40,000 which has sprung up like a mushroom, gives one the impression of waning prosperity, as though there was no good reason for its existence.

After searching out the house of Simon the tanner, where Peter lodged in the long ago, we visited the traditional tomb of Dorcas, then passing out again upon the fertile plain of Sharon, all aglow with the rays of the setting sun, we turn homeward over the Shephelah into the hills of Judea with their winding wadis and reach the Golden City just as the mantle of night is thrown over its historic domes and minarets.

Letters to The Christian Science Monitor

Brief communications are welcomed, but The Christian Science Monitor Editorial Board must reserve sole judge of their suitability, and this which will not be held strictly or solely responsible for the facts or opinions presented. Anonymous letters are destroyed unread.

"Why Voters Don't Vote"

TO THE CHRISTIAN SCIENCE MONITOR:

My last letter to you has brought to the cause for which I am working a most important supporter, as well as a number of letters from those who are earnestly and intelligently interested. For that reason I am eager to reply to Mr. Ruehl on the subject of his communication to you published under the caption, "Why Voters Don't Vote."

All Mr. Ruehl says is undoubtedly true, but as I see it, he has not reached the roots of the matter. The roots and the source of things lovely and bad are in child life. There, and only there, is it possible to develop that which is good on a large scale, and on the same scale prevent the developing of that which is bad.

Our public school system is carried on as if it were designed for the special purpose of destroying our form of government. Indeed it has seemed to me that no Bolshevistic propaganda could compare with the fight carried on, ignorantly it is true, by the school authorities of our Nation.

Thirty years' struggle in this connection has convinced me that, though there are many exceptions to the rule, our school people as a whole are entirely indifferent as to whether "the experiment of democracy in America" is a success or a failure, and are unwilling to see what is causing so much crime and disloyalty to the plan of the Constitution, that the will of the people shall govern by their votes.

The practical and thoroughly successful remedy is child-citizenship in school republics, to which the 2 per cent of the children who are in the stream of criminality respond as eagerly as do the 98 per cent, and thus the stream of criminality and disloyalty to the ballot is broken, and can flow no farther, so far as they are concerned.

The whole school is conducted as a national government, under the Constitution of the United States, and elections of president and vice-president are three times each year. Every schoolroom government is conducted as a typical American city, but elections are every month.

By this means, the children are enabled to assume the responsibilities of their American citizenship and form the habit of voting loyally and intelligently in every election in which they have the right to vote.

The ancient, immoral monarchical government in the schools, which should have been abolished as soon as the Declaration of Independence was proclaimed, should be eliminated at once, whether the school authorities like it or not. They all like it when the owners of the schools, or any higher authority, require this moral and civic training in the schools.

Philadelphia, Pa. WILSON L. GILL.
